The American Psychiatric Publishing Textbook of Psychiatry Robert E. Hales 2008 Its previous edition hailed as "the best reference for the majority of practicing psychiatrists" (Doody's Book Reviews) and a book that "more than any other, provides an approach to how to think about psychiatry that integrates both the biological and psychological" (JAMA), The American Psychiatric Publishing Textbook of Psychiatry has been meticulously revised to maintain this preeminence as an accessible and authoritative educational reference and clinical compendium. It combines the strengths of its three editors -- Robert Hales in clinical and community psychiatry, Stuart Yudofsky in neuropsychiatry, and new co-editor Glen Gabbard in psychotherapy -- in recruiting outstanding authors to summarize the latest developments in psychiatry and features 101 contributors, 65 of whom are new to this edition. The book boasts a new interior design, with more figures and color throughout to aid comprehension. Each chapter ends with 5-10 key points, 5-10 recommended readings, and helpful Web sites not only for the clinician but also for patients and family members. The book also includes complimentary access to the full text online. Online benefits include powerful searching, electronic bookmarking, and access by username and password from wherever you have Web access -- especially convenient for times when the print copy of your textbook is not where you are. The online version is accompanied by a downloadable PowerPoint presentation, which contains a wealth of material to enhance classroom presentation, study, and clinical use. Among the improvements to this edition's content:

- Of the text's 44 chapters, 23 either feature new topics or have new authors, making this the most completely revised edition yet.
- New basic-science chapters on cellular and molecular biology of the neuron and on neuroanatomy for the psychiatrist conveniently distill essential information on the biological foundations of psychiatric disorders for clinicians.
- A new chapter on human sexuality and sexual dysfunctions, and another new chapter on treatment of gay, lesbian, bisexual, and transgender patients, equips clinicians to address the entire spectrum of sexual issues and their attendant mental health concerns.
- New chapters on nonpharmacological somatic treatments, supportive psychotherapy, and combination psychotherapy and pharmacotherapy augment the section on psychiatric treatments.
- A new chapter on the assessment of dangerousness -- an individual's propensity to commit violent acts -- presents helpful guidelines for appropriately evaluating and minimizing the risk of violence in both outpatient and inpatient settings.

Why The American Psychiatric Publishing Textbook of Psychiatry will be your first choice among comprehensive psychiatry textbooks:

- Complimentary Access to the Full Text Online -- Online benefits include powerful searching, electronic bookmarking, and download to PDA.
- PowerPoint Presentation -- Online version is accompanied by a downloadable PowerPoint presentation, which contains a wealth of material to help you enhance classroom presentation, study, and in clinical use.
- Self-Assessment -- An interactive online Self-Assessment allows you to assess your knowledge of each chapter, with links back to the textbook when more study is needed.
- Summary Points -- Each chapter ends with 5-10 key points, 5-10 recommended readings, and helpful web sites not only for the clinician but also for referral to patients and family members.
- Co-Editor Glen O. Gabbard, M.D. -- As the third Co-Editor, Dr. Gabbard adds depth and perspective to psychotherapeutic approaches.
- Chapter Authors -- Partnership of senior and junior faculty brings fresh insights tempered by wisdom and experience.
- Peer-Reviewed -- Rigorously peer reviewed and updated to reflect the rapidly changing profession.
- Disclosure of Interest Statements -- Disclosure from each chapter author assures you that potential biases have been removed.
- Comprehensive But Concise -- Inclusion of essential information eases information overload.
- Better Layout -- Larger type for text makes book easier to read and color figures are provided throughout the text. It's no wonder that this text has established itself as both a leading scholarly reference and an indispensable clinical resource. The American Psychiatric Publishing Textbook of Psychiatry is a proven teaching tool and an essential component of every practitioner's library.

Pelvic Floor Dysfunction and Pelvic Surgery in the Elderly David A. Gordon 2017-05-27 This text provides a comprehensive, state of the art review of this field and will serve as a resource for urologists, colorectal surgeons, geriatricians, and gynecologists as well as researchers interested in neuromuscular phenomena in the pelvis. The book also reviews new data regarding risk factors for pelvic floor muscle dysfunction and profiles new minimally invasive surgical strategies for well known pelvic disease processes. Each chapter is chock full of data from landmark trials which have been published over the past few years and placed in context with respect to current management techniques for pelvic floor disorders. Written by experts in their field, Pelvic Floor Dysfunction and Pelvic Surgery in the Elderly: An Integrated Approach provides a concise yet comprehensive summary to help guide patient management.?

Corporate Corruption Marshall B. Clinard 1990 This insightful book is a comprehensive examination of corporate misbehavior and abuses. Turning a harsh spotlight on America's prestigious Fortune 500, Clinard reveals that despite their massive production powers, far too many of America's proudest industrial giants have abused the public trust, the people who consume their products, their stockholders, the environment, and even the Third World that they profess to help. Clinard identifies the auto, oil, pharmaceutical, and defense industries as the major offenders. He devotes a chapter to each of them, as well as chapters on corporate violence and bribery, and a final discussion of how to correct these widespread abuses. While avoiding the undignified zealotry of tabloid muckraking, this volume examines the disparity between the facts of corporate misconduct and the glowing image that advertising and other media portray of these corporations.

Addict in the House Robin Barnett 2016-08-01 "This is a straightforward, rich resource for anyone who lives with, and loves, an addict." —Publishers Weekly Everyone suffers when there's an addict in the family. Written by an expert in alcohol and drug addiction and recovery, this no-nonsense guide will help you understand the causes of addiction, end enabling behaviors, support your loved one's recovery, and learn how to cope with relapses. If you're the family member of an addict, you may feel confused, guilty, and scared of doing the wrong thing. And when you don't know how to help, you may find yourself in a codependent role, trying so hard to keep your addicted loved one alive, out of jail, or emotionally appeased that you may actually prevent them from realizing they need help. Drawing on her own personal experience with her

brother's addiction, *Addict in the House* offers a pragmatic, step-by-step guide to dealing with a loved one's addiction, from accepting the reality of the disease to surviving what may be repeated cycles of recovery and relapse. You'll learn how to encourage your addicted loved one to get help without forcing it, and finally find the strength to let go of codependence. With this revealing and straightforward book, you'll have the support you need to take an honest look at how addiction has affected the family, cope with the emotional hurdles of having an addicted family member, create and maintain firm boundaries, and make informed decisions about how to best help your loved one.

Epigenetics and Neuroendocrinology Dietmar Spengler 2016-06-29 The field of neuroendocrinology has extended from the initial interest in the hypothalamic control of pituitary secretion to embrace multiple reciprocal interactions between the central nervous system (CNS) and endocrine systems in the coordination of homeostasis and various physiological responses from adaptation to disease. Most recently, epigenetic mechanisms were recognized for their role in the development of the neuroendocrine axes as well as in the mediation of gene-environment interactions in stress-related psychiatry disorders.

Epidemiology of the Rheumatic Diseases Alan J. Silman 1993 The book is a reference work reviewing in detail currently available data on the epidemiology of the major rheumatic and musculoskeletal diseases. The volume considers the problems of disease definition and criteria, data on the occurrence of these diseases, both prevalence and incidence, and describes their variation with age, sex, geographical area, ethnic group, and trends over time. Also reviewed are results of epidemiological investigations looking at risk factors, both genetic and environmental. The results of family and twin studies are considered together with new data from immunogenetics and molecular biology. The impact of specific diseases on survival is also considered.

Textbook of Administrative Psychiatry John A. Talbott 2008-11-01 Today's practice of psychiatric administration is totally different from that in past years because of the vast changes sweeping the health care and behavioral health care sectors. Reflecting these changes, this completely revamped second edition contains all-new chapters by 68 contributors (most new to this edition). This definitive textbook provides the practitioner and student of administration in behavioral healthcare with an up-to-date compendium focused on five central issues that represent the framework of the debate that will guide the evolution of behavioral health care during the next few years An overview of the evolving behavioral health system, from the rich legacy of the community mental health movement mandated by federal legislation in the 1960s to today's paradigm, which is instead driven by the marketplace phenomena of managed care, information systems, and consumer empowerment. Core and new administrative psychiatry concepts and new roles for behavioral health players, including organizational theories, leadership requirements, planning models, and information system solutions, as well as new models of program evaluation and quality management and innovations in training and human resource development. How selected behavioral health systems are changing and the trend toward integrated systems, addressing the challenge of delivery system configuration and integrated service delivery as the system evolves from cost-based fee for service to managed care settings, as well as important new roles for psychiatric administrators in behavioral health network establishment and maintenance, staffing, capitated financing, population-based care, and outcome management. A comprehensive overview of the current system, from hospitals (including VA and military services) to county mental health departments, child and family service agencies, and HMOs, with new roles for everyone -- psychiatrists, administrators, and mental health clinicians as well as consumers and their families -- in the consumer-focused health care systems of the future. Law and ethics, which includes prisons and civil law issues and considers the special challenge of working within a field where innovation, science, and the marketplace are running well ahead of the legal and bioethics communities. Offering an in-depth study of areas never before covered, this extensively referenced volume concludes with a discussion of future issues in administrative psychiatry, as the "disruptive technologies" that forced the restructuring of banking, automobile manufacturing, consumer electronics, and other industries start to have an impact on health care. Broad in appeal as well as scope, this unique reference will find a worldwide audience -- from administrators facing the challenges of designing and administering a cost-efficient, effective care system to trainees studying for certification, and nearly everyone in between: from social workers to medical directors, staff psychiatrists, nurses, and middle managers of private and public psychiatric hospitals and behavioral health managed care organizations.

Integrating Clinical and Translational Research Networks--Building Team Medicine Ravi Salgia 2021 Medical centers are widely recognized as vital components of the healthcare system. However, academic medical centers are differentiated from their community counterparts by their mission, which typically focuses on clinical care, education, and research. Nonetheless, community clinics/hospitals fill a critical need and play a complementary role serving as the primary sites for health care in most communities. Furthermore, it is now increasingly recognized that in addition to physicians, physician-scientists, and other healthcare-related professionals, basic research scientists also contribute significantly to the emerging inter- and cross-disciplinary, team-oriented culture of translational science. Therefore, approaches that combine the knowledge, skills, experience, expertise, and visions of clinicians in academic medical centers and their affiliated community centers and hospitals, together

with basic research scientists, are critical in shaping the emerging culture of translational research so that patients from the urban as well as suburban settings can avail the benefits of the latest developments in science and medicine. 'Integrating Clinical and Translational Research Networks--Building Team Medicine' is an embodiment of this ethos at the City of Hope National Medical Center in Duarte, California. It includes a series of papers authored by teams of leading clinicians, basic research scientists, and translational researchers. The authors discuss how engaging and collaborating with community-based practices, where the majority of older patients with cancer receive their care, can ensure that these patients receive the highest-quality, evidence-based care. Based on our collective experience at City of Hope, we would like to stress that the success of academic-community collaborative programs not only depends on the goodwill and vision of the participants but also on the medical administration, academic leadership, and policymakers who define the principles and rules by which cooperation within the health care industry occurs. We trust that our experience embodied in this singular compendium will serve as a 'Rosetta Stone' for other institutions and practitioners.

Abnormal Psychology and Life: A Dimensional Approach Christopher A. Kearney 2011-01-01 Chris Kearney and Tim Trull's **ABNORMAL PSYCHOLOGY AND LIFE: A DIMENSIONAL APPROACH** provides students with a concise, contemporary, science-based view of psychopathology that emphasizes the individual first. Through consistent pedagogy featuring clinical cases and real first-person narratives, the text illuminates our understanding that abnormal behavior can be viewed along a continuum. By highlighting this widely accepted dimensional view which places the behavior of an individual at the forefront of clinical definition, assessment, and treatment the text's goal is to foster personal relevance for students and encourage them to become intelligent consumers of mental health information. The book also gives students a comprehensive understanding of the features and epidemiologies, risk factors and prevention, assessment and treatment, and long term prognosis and associated stigma of mental disorders. The Chemical Muse D. C.A. Hillman, Ph.D. 2014-09-30 "The last wild frontier of classical studies." ---The Times (UK) The Chemical Muse uncovers decades of misdirection and obfuscation to reveal the history of widespread drug use in Ancient Rome and Greece. In the city-states that gave birth to Western civilization, drugs were an everyday element of a free society. Often they were not just available, but vitally necessary for use in medicine, religious ceremonies, and war campaigns. Their proponents and users existed in all classes, from the common soldier to the emperor himself. Citing examples in myths, medicine, and literature, D. C. A. Hillman shows how drugs have influenced and inspired the artists, philosophers, and even politicians whose ideas have formed the basis for civilization as we know it. Many of these ancient texts may seem well-known, but Hillman shows how timid, prudish translations have left scholars and readers in the dark about the reality of drug use in the Classical world. Hillman's argument is not simply "pro-drug." Instead, he appeals for an intellectual honesty that acknowledges the use of drugs in ancient societies despite today's conflicting social mores. In the modern world, where academia and university life are often politically charged, The Chemical Muse offers a unique and long overdue perspective on the contentious topic of drug use and the freedom of thought.

Keys of Posttraumatic Coping Luis Cruz-Villalobos 2020-06-30 LUIS CRUZ-VILLALOBOS (Santiago de Chile, 1976). Chilean poet. Doctor in Philosophy (PhD, Vrije Universiteit Amsterdam). Clinical psychologist and professor. He is a specialist in the interdisciplinary study of post-traumatic coping. He has developed academic works that connect hermeneutics, phenomenology and Psychological Biblical Criticism with resilience and posttraumatic growth. **KEYS OF POSTTRAUMATIC COPING. RESILIENCE, POSTTRAUMATIC GROWTH, RELIGIOUS COPING, AND SECOND CORINTHIANS.** The present research is a study on posttraumatic coping in some paragraphs of the second letter to the Corinthians of the Apostle Paul. As a thesis, in methodological terms, follows the steps of the hermeneutical arc proposed by Paul Ricoeur (1976, 2002, 2016) from the perspective of the Psychological Biblical Criticism (Rollins 1983, Kille, 2001, 2004; Ellens, 2012). As a first approach, the Pauline writings were evaluated as a very good alternative to explore the issue of adversity coping, especially 2 Corinthians as the letter with the highest number of explicit descriptions by Paul of traumatic events, in addition to be considered one of the undisputed Pauline writings of greater autobiographical character. In the first part of this study a detailed review of current research on posttraumatic coping in the field of psychology is made. Then they examine exegetically four selected texts from 2 Corinthians that describe the ways in which Paul faced various traumatic events in his life. Each paragraph is analyzed looking for the texts to show their world and their own sense, to then identify the hermeneutical keys of coping that are observed in them. Among the main conclusions reached in this investigation, we can highlight that Paul offered, in the analyzed texts of 2 Corinthians, coping modalities that showed a permanent search for "sense of coherence" (Antonovsky, 1979, 1984, 1987, 1993), which involves the comprehensibility, manageability and significance of adverse events, but in his case, from a fundamentally theological framework ("sense of theological coherence"). In addition, it was found, when looking for common factors in the coping keys observed in the Pauline texts, that these can be synthesized in the so-called "theological virtues": faith, hope and love, which function as dispositions that allow the religious / spiritual articulation of traumatic events, both on a personal and community level. We believe that this study has achieved a significant understanding of hardiness, resilience, posttraumatic growth and positive religious coping modalities, from a theological perspective, which can contribute to the development of new practices of pastoral and psychological care, especially in contexts of adversity.

Mindfulness and Psychotherapy Christopher K. Germer 2005-03-09 Provides a comprehensive introduction to mindfulness and its contemporary clinical applications. Within a coherent conceptual framework, chapters present a wide range of clear-cut procedures for practicing mindfulness techniques and teaching them to patients. The authors blend clinical wisdom, research findings attention and more. State Repression and the Labors of Memory Elizabeth Jelin 2003 Hearing the news from South America at the turn of the millennium can be like traveling in time: here are the trials of Pinochet, the searches for "the disappeared" in Argentina, the investigation of the death of former president Goulart in Brazil, the Peace Commission in Uruguay, the Archive of Terror in Paraguay, a Truth Commission in Peru. As societies struggle to come to terms with the past and with the vexing questions posed by ineradicable memories, this wise book offers guidance. Combining a concrete sense of present urgency and a theoretical understanding of social, political, and historical realities, State Repression and the Labors of Memory fashions tools for thinking about and analyzing the presences, silences, and meanings of the past. With unflappable good judgment and fairness, Elizabeth Jelin clarifies the often muddled debates about the nature of memory, the politics of struggles over memories of historical injustice, the relation of historiography to memory, the issue of truth in testimony and traumatic remembrance, the role of women in Latin American attempts to cope with the legacies of military dictatorships, and problems of second-generation memory and its transmission and appropriation. Jelin's work engages European and North American theory in its exploration of the various ways in which conflicts over memory shape individual and collective identities, as well as social and political cleavages. In doing so, her book exposes the enduring consequences of repression for social processes in Latin America, and at the same time enriches our general understanding of the

fundamentally conflicted and contingent nature of memory. A timely exploration of the nature of memory and its political uses.

Eular Compendium on Rheumatic Diseases Johannes WJ. Bijlsma 2009 The compendium on Rheumatic Diseases found its origin in the successful EULAR on-line course on rheumatic diseases. The yearly updated reviews of the fifty modules of that course form the content of this book. Each chapter is written by two dedicated expert rheumatologists from two different countries, to get a balanced view. Most of them were assisted by a junior doctor or researcher from their own department, in order to stimulate focus on modern educational goals and techniques. The fifty chapters, encompassing the whole spectrum of rheumatology, brought together in a textbook, are a vital part of rheumatologists' continuing medical education, keeping doctors up to date in daily practice. The structure of the chapters in the Compendium is the same as the one of the modules in the on-line course: starting with learning points, text with many figures, tables and pictures, a summary, and a limited number of key references.

Brain, Mind, and Developmental Psychopathology in Childhood M. Elena Garralda 2012 "Brain, Mind, and Developmental Psychopathology in Childhood, part of the International Association of Child and Adolescent Psychiatry and Allied Professions' book series "Working with Children & Adolescents" edited by Elena Garralda and Jean-Philippe Raynaud updates the knowledge about connections between brain, mind, and developmental psychopathology. The volume illuminates our understanding of different types of psychiatric disorders in children including autism, hyperkinetic disorder, obsessive compulsive disorder, and childhood schizophrenia and the effects of child maltreatment and deliberate self harm. This book describes how to integrate physical and psychological treatments for child and adolescent mental health problems and advocacy for the treatment of children and adolescents with mental health problems."--Provided by publisher.

Duplex Ultrasound of Superficial Leg Veins Erika Mendoza 2014-06-30 This book describes in detail the use of duplex ultrasound for exploration of the superficial veins and their pathology. It has a practical orientation, presenting numerous clinical situations and explaining how to identify the different sources of reflux, especially in the groin. The investigation of pathology of the saphenous trunks, perforators and side branches is described in detail. As duplex ultrasound plays an important role during various venous surgical procedures, its application pre, intra and postoperatively is presented. Furthermore, the sonographic appearances of thrombotic pathology of superficial and deep veins, edema and other conditions that may be observed while exploring the veins are fully described. The book is based on the authors' extensive clinical experience and is intended to assist fellow practitioners who want to learn more about the technique it will be equally valuable for physicians and technicians. A wealth of informative images is included with the aim of covering every potential situation.

Performing Feeling in Cultures of Memory B. Trezise 2014-06-27 Performing Feeling in Cultures of Memory brings memory studies into conversation with a focus on feelings as cultural actors. It charts a series of memory sites that range from canonical museums and memorials, to practices enabled by the virtual terrain of Second Life, popular 'trauma TV' programs and radical theatre practice.

The Heart in Systemic Autoimmune Diseases Andrea Dorea 2004-01-20 This first volume represents the state-of-the-art in the field of cardiovascular disease and autoimmune rheumatic diseases. Systemic autoimmune diseases comprise a family of conditions that share common pathogenetic mechanisms as well as a multi-organ involvement including the heart. This volume has been subdivided into three parts. In the first part, the immune mechanisms involved in cardiac damage have been considered. The role of proinflammatory and regulatory cytokines in driving an autoimmune response to cardiac self-tissues has been analysed. Moreover, the prevalence, the clinical meaning and the hypothetical pathogenicity of a broad spectrum of organ and non-organ specific autoantibodies have been discussed in detail. In the second part of the volume, the role of humoral and innate immunity in promoting the development of atherosclerotic plaque has been extensively reviewed, along with the newly discovered anti-inflammatory properties of statins. These two parts of the volume deal with exciting aspects of this topic, suggesting a very close connection between heart diseases and immunology. Finally, in the third part, the cardiac manifestations observed in the major systemic autoimmune conditions have been comprehensively examined. This book yields an impressive body of well ordered information, highlighting key references and summarising the experience of a selected panel of distinguished physician-scientists actively involved in the field of cardiovascular disease and systemic autoimmunity.

At Memory's Edge James Edward Young 2000-01-01 How should Germany commemorate the mass murder of Jews once committed in its name? In 1997, James E. Young was invited to join a German commission appointed to find an appropriate design for a national memorial in Berlin to the European Jews killed in World War II. As the only foreigner and only Jew on the panel, Young gained a unique perspective on Germany's fraught efforts to memorialize the Holocaust. In this book, he tells for the first time the inside story of Germany's national Holocaust memorial and his own role in it. In exploring Germany's memorial crisis, Young also asks the more general question of how a generation of contemporary artists can remember an event like the Holocaust, which it never knew directly. Young examines the works of a number of vanguard artists in America and Europe--including Art Spiegelman, Shimon Attie, David Levinthal, and Rachel Whiteread--all born after the Holocaust but indelibly shaped by its memory as passed down through memoirs, film, photographs, and museums. In the context of the moral and aesthetic questions raised by these avant-garde projects, Young offers fascinating insights into the controversy surrounding Berlin's newly opened Jewish museum, designed by Daniel Libeskind, as well as Germany's soon-to-be-built national Holocaust memorial, designed by Peter Eisenman. Illustrated with striking images in color and black-and-white, *At Memory's Edge* is the first book in any language to chronicle these projects and to show how we remember the Holocaust in the after-images of its history.

Scuba Diving Tourism Ghazali Musa 2013-06-26 This volume offers new insight into an important and largely under-examined area of marine leisure and tourism: scuba diving tourism. Knowledge of scuba diving has long been hidden among broad discussions of water-based sports and activities and this focused book aims to shed further understanding and knowledge on this popular international activity. The book examines the current issues central to research into and management of scuba diving Tourism from multidisciplinary perspectives such as health and safety, climate change, policy and regulation and the recreation/leisure context. It further reveals critical management issues of economic, environmental and socio-cultural impacts related to scuba diving tourism which extends to the influence of climate change on the industry's operations and future. This significant volume which conceptualizes the issues surrounding scuba diving tourism now and in the future is written by leading experts in this field and will be valuable reading for all those interested in marine leisure and tourism.

Mechanisms of Adiponectin Action Tania Fiaschi 2019-07-26 The adipokine adiponectin is very concentrated in plasma, and decreased levels of adiponectin are associated with pathological conditions such as obesity, diabetes, cardiovascular diseases, and metabolic syndrome. When produced in its full-length form, adiponectin self-associates to generate multimeric complexes. The full-length form of adiponectin can be cleaved by the globular form of elastase that is produced locally, and the resulting biological effects are exerted in a paracrine or autocrine manner. The different forms of adiponectin bind to specific receptors consisting of two G-protein-independent, seven-transmembrane-spanning receptors, called AdipoR1 and AdipoR2, while T-cadherin has been identified as a potential receptor for high molecular weight complexes of adiponectin. Adiponectin exerts a key role in cellular metabolism, regulating glucose levels as well as fatty acid breakdown. However, its biological effects are heterogeneous, involving multiple target tissues. The Special Issue "Mechanisms of Adiponectin Action" highlights the

pleiotropic role of this hormone through 3 research articles and 7 reviews. These papers focus on the recent knowledge regarding adiponectin in different target tissues, both in healthy and in diseased conditions.

Williams Hematology, 9E Kenneth Kaushansky 2015-12-23 Publisher's Note: Products purchased from Third Party sellers are not guaranteed by the publisher for quality, authenticity, or access to any online entitlements included with the product. The world's most highly regarded reference text on the mechanisms and clinical management of blood diseases A Doody's Core Title for 2019! Edition after edition, Williams Hematology has guided generations of clinicians, biomedical researchers, and trainees in many disciplines through the origins, pathophysiological mechanisms, and management of benign and malignant disorders of blood cells and coagulation proteins. It is acknowledged worldwide as the leading hematology resource, with editors who are internationally regarded for their research and clinical achievements and authors who are luminaries in their fields. The Ninth Edition of Williams Hematology is extensively revised to reflect the latest advancements in basic science, translational pathophysiology, and clinical practice. In addition to completely new chapters, it features a full-color presentation that includes 700 photographs, 300 of which are new to this edition, and 475 illustrations. Recognizing that blood and marrow cell morphology is at the heart of diagnostic hematology, informative color images of the relevant disease topics are conveniently integrated into each chapter, allowing easy access to illustrations of cell morphology important to diagnosis. Comprehensive in its depth and breath, this go-to textbook begins with the evaluation of the patient and progresses to the molecular and cellular underpinnings of normal and pathological hematology. Subsequent sections present disorders of the erythrocyte, granulocytes and monocytes, lymphocytes and plasma cells, malignant myeloid and lymphoid diseases, hemostasis and thrombosis, and transfusion medicine.

Social Measurement Donald T. Campbell 2001-02-02 This book provides researchers, evaluators, and graduate students with a user-friendly presentation of Campbell's essential work (including his latest thoughts on some of his classic works) in social measurement. The book includes Campbell's arguments as to why qualitative approaches belong with quantitative ones as the assumptive background to relevant quantitative measures, his debate with deconstructionists and social constructionists on measurement validity, and an expansion and further explanation of his multitrait-multimethod matrix. By including overviews for each part and article as well as provide social scientists with useful insights into Campbell's papers in a format accessible to advanced undergraduate and graduate students.
