This book presents the design of steel structures using finite element methods (FEM) according to the current state of the art in Germany and the rest of Europe. After a short introduction on the basics of the design, this book illustrates the FEM with a focus on internal forces, displacements, critical loads and modal shapes. Next to finite element procedures for linear calculations considering the stress states of normal force, biaxial bending and warping torsion, non-linear calculations and the stability cases of flexural buckling, lateral torsional buckling and plate buckling are concentrated on significantly. In this context, design procedures for stability according to the standards DIN 18800 and Eurocode 3 are introduced and discussed. In addition, important fundamental issues are covered, such as the determination of cross-section properties as well as the elastic and plastic cross-section resistance.

Complementary, finite element procedures for cross sections are dealt with, which will have an increasing importance in the future. This book has evolved within the teaching activities of the authors in the lecture "Computer-oriented Design of Steel Structures" on the Masters' Programme "Computational Engineering" at the University of Bochum. It covers the total variety of demands needed to be discussed for the safe, economic and modern design of steel structures.

From the beginning Integrated Photonics introduces numerical techniques for studying non-analytic structures. Most chapters have numerical problems designed for solution using a computational program such as Matlab or Mathematica. An entire chapter is devoted to one of the numeric simulation techniques being used in optoelectronic design (the Beam Propagation Method), and provides opportunity for students to explore some novel opti-

cal structures without too much effort. Small pieces of code are supplied where appropriate to get the reader started on the numeric work. Integrated Photonics is designed for the senior/first year graduate student, and requires a basic familiarity with electromagnetic waves, and the ability to solve differential equations with boundary conditions.

Hodaka motorcycles were some of the most creatively marketed and designed motorcycles in America. The bike of choice for the hip young racer, the street-savvy urbanite, or the 14-year-old boy's favorite poster, these machines had colorful logos, creative advertising and terrific names. The Combat Wombat, Road Toad, Dirt Squirt and the fantastic Super Rat are just a few of the models produced by Hodaka. More than 15 years in the making, this exhaustively-researched tome contains all the details about the machines as well as a treasure trove of photographs, advertisements, and graphics. Written by Ken Smith, the editor of VMX Magazine, and created with the help of Paul Stannard of Strictly Hodaka and many of the people who designed and sold Hodakas back in the day, this book is a captivating, colorful look at one of the wildest, most popular motorcycles of the 1960s and 1970s.

In *American Power*, Mitch Epstein investigates notions of power, both electrical and political. His focus is on energy - how it gets made, how it gets used, and the ramifications of both. From 2003 to 2008, he photographed at and around sites where fossil fuel, nuclear, hydroelectric, wind, and solar power are produced in the United States. The resulting photographs contain Epstein's signa-

ture complex wit, surprising detail, and formal rigor. These pictures illuminate the intersection between American society and American landscape. Here is a portrait of early 21st century America, as it clings to past comforts and gropes for a more sensible future. In an accompanying essay, Epstein discusses his method, and how making these photographs led him to think harder about the artist's role in a country teetering between collapse and transformation.

The wit and wisdom of Dr. Dyer is reflected in this extraordinary collection of inspirational quotes and observations. Whether you're already on the 'path' or just doing your best to get there, this book will give you the impetus to keep moving forward.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Infectious disease outbreaks are frequently characterized by sci-

entific uncertainty, social and institutional disruption, and an overall climate of fear and distrust. Invariably, the countries most affected by outbreaks have limited resources, under-developed legal and regulatory structures, and health systems that lack the resilience to deal with crisis situations. Policy-makers and public health professionals may be forced to weigh and prioritize potentially competing ethical values in the face of severe time and resource constraints. This document seeks to assist policy-makers, health care providers, researchers, and others prepare for outbreak situations by anticipating and preparing for the critical ethical issues likely to arise. In addition to setting forth ethical principles applicable to infectious disease outbreaks generally, it shows how these principles can be adapted to different epidemiological and social circumstances.

This is a true story about a special relationship that developed between a wild desert bird and the owner and friends of a special house in the Western Mojave in California. If you have ever looked into the eyes of a wild animal, especially in its natural habitat, you know how special that moment can be. Anyone with a family pet knows the special bond between animal and man and it can be a truly amazing experience. In fact, most pet "owners" consider their animals to be an integral part of the family and include them in weddings, rely on them for protection and grieve upon their demise. Having an untamed animal not only approach you but maintain a constant presence throughout its life was transformative for me and became a defining part of my life. It is a story that is best shared and will hopefully enrich yours as well.

Describes the rules and techniques of moto-cross racing and the

construction of the motorcycles used in the events.

James's notion of sciousness or 'pure experience' is akin to Zen tathata (suchness). Japan's renowned philosopher Kitaro Nishida, in fact, used James's concept to explain tathata to the Japanese themselves. As this collection of essays makes clear, Western practioners of Zen and other nondual practices need not be spiritual vagabonds. We need, rather, to claim our inheritance from the 'father of American psychology.'
