Environmental Change and Agricultural Sustainability in the Mekong Delta Mart A. Stewart 2011-05-13 The Mekong Delta of Vietnam is one of the most productive agricultural areas in the world. The Mekong River fans out over an area of about 40,000 sq kilometers and over the course of many millennia has produced a region of fertile alluvial soils and constant flows of energy. Today about a fourth of the Delta is under rice cultivation, making this area one of the premier rice granaries in the world. The Delta has always proven a difficult environment to manipulate, however, and because of

population pressures, increasing acidification of soils, and changes in the Mekong's flow, environmental problems have intensified. The changing way in which the region has been linked to larger flows of commodities and capital over time has also had an impact on the region: For example, its re-emergence in recent decades as a major rice-exporting area has linked it inextricably to global markets and their vicissitudes. And most recently, the potential for sea level increases because of global warming has added a new threat. Because most of the region is on average only a few meters above sea level and because any increase of sea level will change the complex relationship between tides and down-river water flow, the Mekong Delta is one of the areas in the world most vulnerable to the effects of climate change. How governmental policy and resident populations have in the past and will in coming decades adapt to climate change as well as several other emerging or ongoing environmental and economic problems is the focus of this collection.

Future Babble Dan Gardner 2010-10-12 In 2008, as the price of oil surged above \$140 a barrel, experts said it would soon hit \$200; a few months later it plunged to \$30. In 1967, they said the USSR would have one of the fastest-growing economies in the year 2000; in 2000, the USSR did not exist. In 1911, it was pronounced that there would be no more wars in Europe; we all know how that turned out. Face it, experts are about as accurate as dart-throwing monkeys. And yet every day we ask them to predict the future — everything from the weather to the likelihood of a catastrophic terrorist attack. Future Babble is the first book to examine this phenomenon, showing why our brains yearn for certainty about the future, why we are attracted to those who predict it confidently, and why it's so easy for us to ignore the trail of outrageously wrong forecasts. In this fast-paced, example-

packed, sometimes darkly hilarious book, journalist Dan Gardner shows how seminal research by UC Berkeley professor Philip Tetlock proved that pundits who are more famous are less accurate — and the average expert is no more accurate than a flipped coin. Gardner also draws on current research in cognitive psychology, political science, and behavioral economics to discover something quite reassuring: The future is always uncertain, but the end is not always near.

Global Perspectives on Underutilized Crops Munir Ozturk
2018-05-17 Increase in world population, extreme weather conditions, decrease in fresh water supplies, and changes of dietary habits are major issues that affect global food security. We are expected to face the challenges of land use by 2050 because population will reach 9 billion while agricultural productivity losses are expected due to overuse of lands. How can we feed the next generations in a manner that respects our finite natural resources? Managing our resources in a sustainable way have only begun for selected crops. Much remains to be done to increase food yield. Cropping practices capable of sustainable production need to be elaborated, especially in fragile ecosystems. Typical applications will include the improvement and use of genetic resources; crop management and diversification; diffusion of improved varieties; development of cropping systems; sustainable cropping systems for areas prone to environmental degradation; use of agro-ecological data for crop production forecasting; and networks for regional coordination, and data exchange. The impetus behind this book is to bring attention to a cropping system that bears direct relevance to sustainable agriculture and food security. “Underutilized” crops are found in numerous agricultural ecosystems and often survive mainly in marginal areas. It is

timely to review their status because, in recent decades, scientific and economic interests have emerged which focus on lesser-known cultivated species. Underutilized crops have a great potential to alleviate hunger directly, through increasing food production in challenging environments where major crops are severely limited. "Global Perspectives on Underutilized Crops" is therefore topical and highlights the unmet agricultural challenges that we face today. This book is an important resource for students and researchers of crop science and agricultural policy makers.

Expanding the Boundaries of Transformative Learning E.

O'Sullivan 2016-04-30 Transformative learning involves experiencing a deep, structural shift in the basic premises of thought, feelings, and actions. It is a shift of consciousness that dramatically and permanently alters our way of being in the world. Such a shift involves our understanding of ourselves and our self-locations; our relationships with other humans and with the natural world; our understanding of relations of power in interlocking structures of class, race and gender; our body awarenesses; our visions of alternative approaches to living; and our sense of possibilities for social justice and peace and personal joy. The editors of this

collection make several challenges to the existing field of transformative learning - the first is to theoreticians, who have attempted to describe the nature of transformative learning without regard to the content of transformative learning. The editors argue that transformative learning theory cannot be constructed in a content-neutral or context-free way. Their second challenge, which assumes the importance content for transformative learning, is to educators as practitioners. The editors argue that transformative learning requires new educational practices consistent with the content. Arts-based research and arts-based teaching/learning practices are one example of such new educational practices. Education for the soul, or spiritual practices such as meditation or modified martial arts or indigenous peoples' forms of teaching/learning, is another example. Each article in the collection presents a possible model of these new practices.

The Tipping Point Malcolm Gladwell 2006-11-01 From the bestselling author of *The Bomber Mafia*: discover Malcolm Gladwell's breakthrough debut and explore the science behind viral trends in business, marketing, and human behavior. The tipping point is that magic moment when an idea, trend, or social behavior crosses a threshold, tips, and spreads like wildfire. Just as a single sick person can start an epidemic of the flu, so too can a small but precisely targeted push cause a fashion trend, the popularity of a new product, or a drop in the crime rate. This widely acclaimed bestseller, in which Malcolm Gladwell explores and brilliantly illuminates the tipping point phenomenon, is already changing the way people throughout the world think about selling products and disseminating ideas. "A wonderful page-turner about a fascinating idea that should affect the way every thinking person looks at the world." —Michael Lewis

Spell of the Urubamba Daniel W. Gade 2015-10-05 This work examines the valley of the Urubamba River in terms of vertical zonation, Incan impact on the environment, plant use, the history of exploration and the notion of discovery, the idea of land reform, and cultural contact with the European world. Winding its path northward from the Andean Highlands to the Amazon, the valley has served as the stage of pre-Columbian

civilizations and focal point of Spanish conquest in Peru. "Gade left behind not only a superb body of scholarly work, but a network of colleagues and students who remain indebted to his example. This book should serve as an inspiration for all scholars who wish to pursue the Sauerian, counter enlightenment or post development agendas of understanding and respecting particular places in all their historical and cultural complexity, including ambiguities and contradictions." -- The Geographical Review, American Geographical Society

Cashing in on Education Mercedes Mateo Díaz 2016-10-19

Investments in education across countries in Latin America and the Caribbean have transformed the lives of millions of girls and the prospects of their families and societies. Unleashing the full economic potential of women is nevertheless still a curtailed issue in the region: just about half of women are unable to participate in paid work. The majority of the population out of the labor market is women between the ages of 24 and 45. This is the largest share of the available pool of unused human capital countries have, and where mothers of young children are concentrated. This book argues that more and better childcare constitutes a fundamental policy option to improve female outcomes in the labor market, but countries need to pay particular attention to the design and features of such services. First-rate educational programs will be useless if children are not enrolled or do not attend formal education centers. A large program expansion will be wasted if parents cannot enroll their children because they are unable to reach the center, don't trust its quality, if the program is too expensive, or if work and care schedules are not compatible. Through an integrated framework applied to each country and an overview of the existing evidence, this book addresses the

why and what questions about policy relevant instruments to achieve female labor participation. Parts I and II of the book lay out the motivation for Latin-American and Caribbean countries to act depicting their current situation both in terms of women's labor participation and the use and provision of childcare services. Moreover, this book tackles the how question contributing to the incipient evidence about factors affecting the take-up of programs and demand for childcare services and other informal care arrangements. Part III of the book explores how to improve services and implement more and better formal, center-based care arrangements for young children. It looks at international benchmarks, discusses different experiences and proposes specific actions to solve potential inequalities in access to childcare.

Condemned Without a Trial Stephen D. Krashen 1999 Here is a timely and important book for anyone concerned about the future of bilingual education in America. Written by Stephen Krashen, the nation's foremost expert on second language acquisition, it disproves many of the false assumptions and outright distortions that led to the passage of Proposition 227 in California. Now, as some of those same arguments proliferate in other states, Krashen explains the bases for five of these key beliefs, and proves-step-by-step-why they are wrong: Bilingual education is responsible for the high Hispanic dropout rate. In fact, studies show reduced and even no difference in dropout rates when background factors are controlled. Most immigrants succeeded without bilingual education. Krashen argues that many immigrants arrived here having had a de facto bilingual education in their countries of origin; and that until the last half of this century, economic success was not so strongly dependent on school success. The United States is the only nation that has

bilingual education. There is ample evidence of bilingual programs not only existing, but also succeeding in countries like Norway and the Netherlands. Bilingual education failed in California. The author explores flaws in the methods of various studies and counters with other reasons why bilingual education students may not thrive. Including widespread poverty and lack of reading materials. The public is against bilingual education. This argument, propagated by the media, proves false when one examines the biased language used in survey after survey. In its careful delineation of the real issues, *Condemned Without a Trial* gives educators, administrators, parents, and voters the essential understanding-and evidence-they have heretofore been denied.

The Roseto Story John G. Bruhn 2013-04-17 Roseto is a small Italian-American community in east-central Pennsylvania. This fifteen-year study drawing on medical histories, physical examinations, and laboratory tests, compared a large sample of Rosetans to inhabitants of two neighboring communities, Bangor and Nazareth, and followed up this research with a sociological study of the three communities. Despite a greater prevalence of obesity in Roseto, and despite similar dietary, smoking, and exercise habits and similar ethnic and genetic background, the inhabitants of Roseto were relatively immune to heart disease at the beginning of the research in 1963. They were also strikingly tenacious in adhering to Old World values and customs. When these traditional values and relationship were abandoned by the rising generation, the death rate from heart disease climbed toward the American norm. The study concluded that unconditional interpersonal support counteracts life stress and thus preserves life.

Desert Development Yehuda Gradus 2012-12-06 The fact that approximately one-third of the world's land mass is arid desert may be congenial for the camel and the cactus, but not for people. Nevertheless, well over half a billion people, or 15% of the world's population live in arid desert areas. If the world's population were distributed evenly over the land surface, we would expect to find about 30% of the population inhabiting arid desert areas. Does the fact that 'only' 15% of the world's population live in an arid desert environment reflect the harshness of the environment? Or is it a testimony to the adaptability and ingenuity of mankind? Do we view the glass as half-full? Or half-empty? The contributors to Desert Development: Man and Technology in Sparselands adopt the position that the cup is half-full and, in fact, could be filled much more. Indeed, many arid desert zones do thrive with life, and given appropriate technological development, such areas could support even greater populations. While the dire Malthusian prediction that rapid world population growth exceeds the carrying capacity of existent resource systems has gained popularity (typified by the 1972 Club of Rome book, Limits to Growth), there is a growing body of serious work which rejects such pessimistic 'depletion' models, in favor of models which are mildly optimistic.

Chicano Manual on How to Handle Gringos José Angel Gutiérrez 2003 Literary Nonfiction. Latino/Latina Studies. This manual penned by the founder of the only successful

Hispanic political party, La Raza Unida, brings together an impressive breadth of models to either follow or avoid. Quite often, Gutierrez's voice is not only the seasoned voice of reason, but also that of humor, wry wit and satire. If nothing else, **A CHICANO MANUAL ON HOW TO HANDLE GRINGOS** is a wonderful survey of the Chicano and Latino community on the move in all spheres of life in the United States on the very eve of its demographic and cultural ascendancy.

And? Lynda Lawrence 2020-06-22 Steve Jobs used it to cut a better deal with Disney. George Mitchell and Mary Robinson used it to help end a decades-long war in Northern Ireland. And you can use it in your life and work to get better outcomes for years to come. **AND? Inventive Negotiation** provides a concrete set of steps that can help build long-term relationships instead of lasting enmity. Lavishly illustrated with real life stories from around the world, plus the latest neuroscience and behavioral economics, this book will show you how to get more than your share of the pie - it gives you the tools to build a pie factory. Learn what hostage negotiators and clowns have in common. How a teen bested the phone company. What it takes to talk your way into a prison in Bolivia, or out of a terrorist camp in Colombia. Why you need to handle your chairs carefully in Korea. Every example demonstrates a principle perfected by the authors' decades of experience in everything from oil-pipelines to international peace. Once you've learned the art and science of **Inventive Negotiation**, you'll never be satisfied with transactional or integrative bargaining again. The first thing I learned about negotiating between rival gangs is that the old rules don't work. The only way to stop those wars was to change the process, and create a community. **Inventive Negotiation** demonstrates exactly how it's done, no matter

who or what is in conflict. Reading these stories can change the way you work with others. It might even change the world.

Outliers Malcolm Gladwell 2008-11-18 From the bestselling author of Blink and The Tipping Point, Malcolm Gladwell's Outliers: The Story of Success overturns conventional wisdom about genius to show us what makes an ordinary person an extreme overachiever. Why do some people achieve so much more than others? Can they lie so far out of the ordinary? In this provocative and inspiring book, Malcolm Gladwell looks at everyone from rock stars to professional athletes, software billionaires to scientific geniuses, to show that the story of success is far more surprising, and far more fascinating, than we could ever have imagined. He reveals that it's as much about where we're from and what we do, as who we are - and that no one, not even a genius, ever makes it alone. Outliers will change the way you think about your own life story, and about what makes us all unique.
