Cholas and Pishtacos Mary Weismantel 2001-12-15 Winner of the 2003 Senior Book Prize from the American Ethnological Society. Cholas and Pishtacos are two provocative characters from South American popular culture—a sensual mixed-race woman and a horrifying white killer who show up in everything from horror stories and dirty jokes to romantic novels and travel posters. In this elegantly written book, these two figures become vehicles for an exploration of race, sex, and violence that pulls the reader into the vivid landscapes and lively cities of the Andes. Weismantel's theory of race and sex begins not with individual identity but with three forms of social and economic interaction: estrangement, exchange, and accumulation. She maps the barriers that separate white and Indian, male and female—barriers that exist not in order to prevent exchange, but rather to exacerbate its inequality. Weismantel weaves together sources ranging from her own fieldwork and the words of potato sellers, hotel maids, and tourists to classic works by photographer Martin Chambi and novelist José María Arguedas. Cholas and Pishtacos is also an enjoyable and informative introduction to a relatively unknown region of the Americas.

Model-Based Reasoning in Science and Technology Ángel Nepomuceno-Fernández 2019-10-24 This book discusses how scientific and other types of cognition make use of models, abduction, and explanatory reasoning in order to produce important and innovative changes in theories and concepts. Gathering revised contributions presented at the international conference on Model-Based Reasoning (MBR18), held on October 24–26 2018 in Seville, Spain, the book is divided into three main parts. The first focuses on models, reasoning, and representation. It highlights key theoretical concepts from an applied perspective, and addresses issues concerning information visualization, experimental methods, and design. The second part goes a step further, examining abduction, problem solving, and reasoning. The respective papers

assess different types of reasoning, and discuss various concepts of inference and creativity and their relationship with experimental data. In turn, the third part reports on a number of epistemological and technological issues. By analyzing possible contradictions in modern research and describing representative case studies, this part is intended to foster new discussions and stimulate new ideas. All in all, the book provides researchers and graduate students in the fields of applied philosophy, epistemology, cognitive science, and artificial intelligence alike with an authoritative snapshot of the latest theories and applications of model-based reasoning.

Cashing in on Education Mercedes Mateo Díaz 2016-10-19 Investments in education across countries in Latin America and the Caribbean have transformed the lives of millions of girls and the prospects of their families and societies. Unleashing the full economic potential of women is nevertheless still a curtailed issue in the region: just about half of women are unable to participate in paid work. The majority of the population out of the labor market is women between the ages of 24 and 45. This is the largest share of the available pool of unused human capital countries have, and where mothers of young children are concentrated. This book argues that more and better childcare constitutes a fundamental policy option to improve female outcomes in the labor market, but countries need to pay particular attention to the design and features of such services. First-rate educational programs will be useless if children are not enrolled or do not attend formal education centers. A large program expansion will be wasted if parents cannot enroll their children because they are unable to reach the center, don't trust its quality, if the program is too expensive, or if work and care schedules are not compatible. Through an integrated framework applied to each country and an overview of the existing evidence, this book addresses the why and what questions about policy relevant instruments to achieve female labor participation. Parts I and II of the book lay out the motivation for Latin-American and Caribbean countries to act depicting their current

situation both in terms of women's labor participation and the use and provision of childcare services. Moreover, this book tackles the how question contributing to the incipient evidence about factors affecting the take-up of programs and demand for childcare services and other informal care arrangements. Part III of the book explores how to improve services and implement more and better formal, center-based care arrangements for young children. It looks at international benchmarks, discusses different experiences and proposes specific actions to solve potential inequalities in access to childcare.

Designing Social Inquiry Gary King 2021-08-17 The classic work on qualitative methods in political science Designing Social Inquiry presents a unified approach to qualitative and quantitative research in political science, showing how the same logic of inference underlies both. This stimulating book discusses issues related to framing research questions, measuring the accuracy of data and the uncertainty of empirical inferences, discovering causal effects, and getting the most out of qualitative research. It addresses topics such as interpretation and inference, comparative case studies, constructing causal theories, dependent and explanatory variables, the limits of random selection, selection bias, and errors in measurement. The book only uses mathematical notation to clarify concepts, and assumes no prior knowledge of mathematics or statistics. Featuring a new preface by Robert O. Keohane and Gary King, this edition makes an influential work available to new generations of qualitative researchers in the social sciences.

Case Studies and Theory Development in the Social Sciences Alexander L. George 2005-04-15 The use of case studies

to build and test theories in political science and the other social sciences has increased in recent years. Many scholars have argued that the social sciences rely too heavily on quantitative research and formal models and have attempted to develop and refine rigorous methods for using case studies. This text presents a comprehensive analysis of research methods using case studies and examines the place of case studies in social science methodology. It argues that case studies, statistical methods, and formal models are complementary rather than competitive. The book explains how to design case study research that will produce results useful to policymakers and emphasizes the importance of developing policy-relevant theories. It offers three major contributions to case study methodology: an emphasis on the importance of within-case analysis, a detailed discussion of process tracing, and development of the concept of typological theories. *Case Studies and Theory Development in the Social Sciences* will be particularly useful to graduate students and scholars in social science methodology and the philosophy of science, as well as to those designing new research projects, and will contribute greatly to the broader debate about scientific methods.

Pastimes Ruth V. Russell 2017-02 This sixth edition reflects almost 40 years of scholarship as well as professional and personal practice in recreation, parks, and tourism. The text has become one of the most widely adopted titles in university courses worldwide. In this new edition of the book, the phenomenon of leisure is presented through new research findings and contemporary societal dilemmas to suggest that leisure is one of the most interesting, relevant, and exciting subjects of study today. The book reflects a wide range of material from the disciplines of leisure studies, sociology, psychology, economics, political science, anthropology, geography, the humanities, and media and cultural studies. Indeed, more than a textbook, this is very much a point of view. Leisure is presented as a human phenomenon that is individual and collective, vital and frivolous, historical and contemporary, factual and subjective, and good and bad. As a learning tool, this sixth edition teaches more. It contains updated and new illustrations of concepts through field-based cases, biographical features, exploratory activities, and research studies. In the first part, leisure is defined as a condition of humanity. Its meanings are traced through the humanities and history, as well as in today's connotations. The benefits of leisure are presented, ranging from freedom to pleasure to risk to spirituality, and leisure's benefit to healthful well-being is demonstrated. As well, part one of the text presents theories for explaining leisure behavior. Part Two discusses leisure as a cultural mirror -- its societal context. Chapters include leisure and anthropology, geography, technology, popular culture, and taboo recreation. Finally, in Part Three, the functional side of leisure is explored in terms of its instrumental relationship to work, money, time, and equity. Leisure systems of public, private, and commercial sponsorship are described to confirm leisure's utility. Instructor resources and a website for student resources available.

The Construction of Value in the Ancient World John K. Papadopoulos 2012-12-31 Recipient of the Jo Anne Stolaroff Cotsen Prize Scholars from Aristotle to Marx and beyond have been fascinated by the question of what constitutes value. The Construction of Value in the Ancient World makes a significant contribution to this ongoing inquiry, bringing together in one comprehensive volume the perspectives of leading anthropologists, archaeologists, historians, linguists, philologists, and sociologists on how value was created, defined, and expressed in a number of ancient societies around the world. Based on the basic premise that value is a social construct defined by the cultural context in which it is

situated, the volume explores four overarching but closely interrelated themes: place value, body value, object value, and number value. The questions raised and addressed are of central importance to archaeologists studying ancient civilizations: How can we understand the value that might have been accorded to materials, objects, people, places, and patterns of action by those who produced or used the things that compose the human material record? Taken as a whole, the contributions to this volume demonstrate how the concept of value lies at the intersection of individual and collective tastes, desires, sentiments, and attitudes that inform the ways people select, or give priority to, one thing over another.

Brands of Faith Mara Einstein 2007-09-14 In a society overrun by commercial clutter, religion has become yet another product sold in the consumer marketplace, and faiths of all kinds must compete with a myriad of more entertaining and more convenient leisure activities. *Brands of Faith* argues that in order to compete effectively faiths have had to become brands – easily recognizable symbols and spokespeople with whom religious prospects can make immediate connections Mara Einstein shows how religious branding has expanded over the past twenty years to create a blended world of commerce and faith where the sacred becomes secular and the secular sacred. In a series of fascinating case studies of faith brands, she explores the significance of branded church courses, such as Alpha and The Purpose Driven Life, mega-churches, and the popularity of the televangelist Joel Olsteen and television presenter Oprah Winfrey, as well as the rise of Kaballah. She asks what the consequences of this religious marketing will be, and outlines the possible results of religious commercialism – good and bad. Repackaging religion – updating music, creating teen-targeted bibles – is justifiable and necessary. However, when the content becomes obscured, religion may lose its unique selling proposition – the very ability to raise us above the market.

Safety of Alternative Approaches to Childbirth Peter F. Schlenzka 2010-06 This study examines the obstetric profession's claim and society's belief that the hospital-based obstetric approach to childbirth is safer with respect to perinatal mortality than the natural approach to childbirth as administered by midwives and some physicians in free-standing birth centers or at home. Using merged birth certificate and hospital discharge data for California for 1989 and 1990, the data show that low-risk women who opt for a natural childbirth in an out-of-hospital setting will experience a slightly though not significantly lower perinatal mortality than low-risk women who opt for a hospital birth. For these approximately 70% of all California birth, hospital birth is thus not "safer" with respect to perinatal mortality. The study suggests significant advantages for the natural childbirth approach with respect to reduced mortality and morbidity from unnecessary cesareans and other obstetric interventions, and significant benefits from avoiding negative downstream consequences from unnecessary obstetric interventions and procedures. The maternity care cost for a natural childbirth system would

also be significantly lower.

Neverending Wars Ann Hironaka 2008-03 Since 1945, the average length of civil wars has increased three-fold. What can explain this startling fact? It can't be ethnic hatreds and injustices--these have been around for centuries. In Neverending Wars, Ann Hironaka points to the crucial role of the international community in propping up many new and weak states that resulted from the decolonization movement after World War II. These impoverished states are prone to conflicts and lack the necessary resources to resolve them decisively. International aid and external military intervention from the international community often perpetuate such conflicts. And the Cold War further exacerbated the problem by providing large amounts of military aid. The continual infusion of weapons and resources can prolong such wars indefinitely. This timely book will provide an entirely new way to look at recent, vicious civil wars, failed states, and the terrorist movements that emerge in their wake.

Trading Places David Hamers 2017-05-26 Trading Places rethinks, develops, and tests design-driven practices and methods to engage with participation in public space and public issues. With this book we aim to help art and design researchers, students, practitioners, and the multiple stakeholders they collaborate with, to explore what participatory ways of working in our contemporary urban environment entail. Six approaches are discussed: intervention, performative mapping, play, data mining, modelling in dialogue, and curating. Each approach offers a different kind of logic and produces a different type of knowledge. Trading Places invites the reader to discover common ground, explore new territories, and exchange points of view – in short, to trade perspectives on issues of participation.
