The Construction of Value in the Ancient World John K. Papadopoulos 2012-12-31 Recipient of the Jo Anne Stolaroff Cotsen Prize Scholars from Aristotle to Marx and beyond have been fascinated by the question of what constitutes value. The Construction of Value in the Ancient World makes a significant contribution to this ongoing inquiry, bringing together in one comprehensive volume the perspectives of leading anthropologists, archaeologists, historians, linguists, philologists, and sociologists on how value was created, defined, and expressed in a number of ancient societies around the world. Based on the basic premise that value is a social construct defined by the cultural context in which it is situated, the volume explores four overarching but closely interrelated themes: place value, body value, object value, and number value. The questions raised and addressed are of central importance to archaeologists studying ancient civilizations: How can we understand the value that might have been accorded to materials, objects, people, places, and patterns of action by those who produced or used the things that compose the human material record? Taken as a whole, the contributions to this volume demonstrate how the concept of value lies at the intersection of individual and collective tastes, desires, sentiments, and attitudes that inform the ways people select, or give priority to, one thing over another.

Veterinary Epidemiology Michael Thrusfield 2013-04-24 This successful book, now in its third edition, continues to provide a comprehensive introduction to the role of epidemiology in veterinary medicine. Since the publication of the second edition there has been considerable expansion in the application of veterinary epidemiology: more quantitative methods are available, challenges such as the epidemic of foot-and-mouth disease in Europe in 2001 have required epidemiological investigation, and epidemiological analyses have taken on further importance with the emergence of evidence-based veterinary medicine. In this edition: Completely revised and expanded chapters; Increased attention given to the principles and concepts of epidemiology, surveillance, and diagnostic-test validation and performance; Many examples are drawn from both large and small animal medicine, and from the developing as well as the developed world This paperback edition includes a new section on risk analysis. Veterinary Epidemiology is an invaluable reference source for veterinary general practitioners, government veterinarians, agricultural economists and members of other disciplines interested in animal disease. It will also be essential reading for undergraduate and intermediate-level postgraduate students of epidemiology.

Meningitis and Encephalitis Rodrigo Hasbun 2018-07-19 Meningitis and Encephalitis are associated with high rates of mortality and neurological sequelae.

The differential diagnosis includes a wide spectrum of infectious and non-infectious etiologies, some requiring urgent therapy for survival. The current management challenges in patients with meningitis and encephalitis include a low sensitivity of meningeal signs, overutilization of unnecessary screening cranial imaging, delays in diagnosis of urgent treatable causes, a large proportion of unknown etiologies, low sensitivity of current microbiological techniques especially in the setting of previous antibiotic therapy, underutilization of available molecular diagnostic tests, and empiric antibiotic therapy and hospitalization for viral meningitis cases. Even though there are published guidelines, compliance with them is not optimal and physicians do not follow standardized

algorithms in their empirical approach. As meningitis and encephalitis is associated with high rates of adverse clinical outcomes, prevention, when feasible is of utmost importance. Adherence to protocols to prevent health-care associated meningitis and ventriculitis are effective but compliance with them is not uniformly performed. This book seeks to improve outcomes for meningitis and encephalitis cases handled by physicians who may or may not be thoroughly trained for these challenges. The text introduces the current guidelines but also discusses the gaps that leave clinicians struggling to implement the most appropriate approaches for these particular neurological infections. Each chapter delivers the tools necessary to identify and adhere to the most appropriate diagnostic technique, management protocols, and prevention approach for each situation. All chapters conclude with discourse on future directions in research and quality improvement. Written by experts in infectious diseases, the book covers topics that are the most devastating, including healthcare-acquired infections, autoimmune encephalitis, and infections as they present in HIV patients. Meningitis and Encephalitis is a well-rounded resource for all medical professionals encountering these neurological syndromes, including infectious disease specialists, neurologists, primary care physicians, and immunologists.

Authors who have studied how agro ecosystems have changed during the first decade and a half of commercial deployment review effects and stress needs that must be considered to make these tools sustainable.

Global Dreams Anouk de Koning 2009 At the start of the twenty-first century, Cairo's cityscape has acquired a spectacular global touch. Its luxurious five-star hotels, high-rise office buildings, immaculately clean malls, and swanky coffee shops serving café latte and caesar salad, along with the budding gated communities in the city's desert expanses, exemplify three decades of economic liberalization. In the surrounding social landscape, the gradual abrogation of the Nasser-era structures that provided many with low-cost goods and services is dearly felt. This new study examines Cairo's experience of economic liberalization in an era of globalization. It asks what happened to a postcolonial middle class that was once the carrier of national aspirations and dreams. It explores how young middle-class professionals navigate Cairo's increasingly divided landscape and discusses the rise of a young uppermiddle class presence in the work, leisure, and public spaces of the city.

Water, Cultural Diversity, and Global Environmental Change Barbara Rose Johnston 2011-12-07 Co-published with UNESCO A product of the UNESCO-IHP project on Water and Cultural Diversity, this book represents an effort to examine the complex role water plays as a force in sustaining, maintaining, and threatening the viability of culturally diverse peoples. It is argued that water is a fundamental human need, a human right, and a core sustaining element in biodiversity and cultural diversity. The core concepts utilized in this book draw upon a larger trend in sustainability science, a recognition of the synergism and analytical potential in utilizing a coupled biological and social systems analysis, as the functioning viability of nature is both sustained and threatened by humans.

Guantánamo and American Empire Don E. Walicek 2018-01-30 This book explores the humanities as an insightful platform for understanding and responding to the military prison at Guantánamo Bay, other manifestations of "Guantánamo," and the contested place of freedom in American Empire. It presents the work of scholars and writers based in Cuba's Guantánamo Province and various parts of the US. Its essays, short stories, poetry, and other texts engage the far-reaching meaning and significance of Gitmo by bringing together what happens on the U.S. side of the fence—or "la cerca," as it is called in Cuba—with perspectives from the outside world. Chapters include critiques of artistic renderings of the Guantánamo region; historical narratives contemplating the significance of freedom; analyses of the ways the base and region inform the Cuban imaginary; and fiction and poetry published for the first time in English. Not simply a critique of imperialism, this volume presents politically engaged commentary that suggests a way forward for a site of global contact and conflict. The Military as an Economic Actor J. Brömmelhörster 2003-11-04 Armed forces across the globe engage in economic activities both in times of war and peace. This book provides a critical analysis of this phenomenon, comparing experiences with 'military business' from four continents (Asia, Africa, Europe

and Latin America). Taking an interdisciplinary approach, the volume shows the implications of 'military business' for civil-military relations, good governance and international development policies.

Public Health Significance of Urban Pests Xavier Bonnefoy 2008 The second half of the 20th century and the beginning of the 21st century witnessed

important changes in ecology, climate and human behaviour that favoured the development of urban pests. Most alarmingly, urban planners now face the dramatic expansion of urban sprawl, in which city suburbs are growing into the natural habitats of ticks, rodents and other pests. Also, many city managers now erroneously assume that pest-borne diseases are relics of the past. All these changes make timely a new analysis of the direct and indirect effects of present-day urban pests on health. Such an analysis should lead to the development of strategies to manage them and reduce the risk of exposure. To this end, WHO invited international experts in various fields - pests, pest-related diseases and pest management - to provide evidence on which to base policies. These experts identified the public health risk posed by various pests and appropriate measures to prevent and control them. This book presents their conclusions and formulates policy options for all levels of decision-making to manage pests and pest-related diseases in the future. [Ed.]

Kitchenspace Maria Elisa Christie 2008-08-01 Throughout the world, the kitchen is the heart of family and community life. Yet, while everyone has a story to tell about their grandmother's kitchen, the myriad activities that go on in this usually female world are often devalued, and little scholarly attention has been paid to this crucial space in which family, gender, and community relations are forged and maintained. To give the kitchen the prominence and respect it merits, Maria Elisa Christie here offers a pioneering ethnography of kitchenspace in three central Mexican communities, Xochimilco, Cocotepec, and Tetecala. Christie coined the term "kitchenspace" to encompass both the inside kitchen area in which everyday meals for the family are made and the larger outside cooking area in which elaborate meals for community fiestas are prepared by many women working together. She explores how both kinds of meal preparation create bonds among family and community members. In particular, she shows how women's work in preparing food for fiestas gives women status in their communities and creates social networks of reciprocal obligation. In a culture rigidly stratified by gender, Christie concludes, kitchenspace gives women a source of power and a place in which to transmit the traditions and beliefs of older generations through quasi-sacramental food rites.
