Contemporary Internal Medicine Juan M. Bowen 1991-08-31 In the previous two volumes of this series, we presented classic problems in internal medicine as illustrated by actual cases cared for in our institution. It has been gratifying for us to see the interest that these volumes have generated with students and trainees. We remain committed to the case method of instruction, and believe that there is no better method to learn medicine than to have an individual patient problem as the basis for study of pathophysiology, natural history, diagnosis and management. We hope that our readers

implications on a range of pressing issues drawn from diverse environments, including the business world and crucial policy realms like health care and ecology. This book provides a valuable complement to Hodgson's earlier work with Thorbjørn Knudsen on evolutionary economics in Darwin's Conjecture, extending the evolutionary outlook to include moral and policy-related issues.

The Genome Odyssey Dr. Euan Angus Ashley 2021-02-23 In The Genome Odyssey, Dr. Euan Ashley, Stanford professor of medicine and genetics, brings the breakthroughs of precision medicine to vivid life through the real diagnostic journeys of his patients and the tireless efforts of his fellow doctors and scientists as they hunt to prevent, predict, and beat disease. Since the Human Genome Project was completed in 2003, the price of genome sequencing has dropped at a staggering rate. It's as if the price of a Ferrari went from \$350,000 to a mere forty cents. Through breakthroughs made by Dr. Ashley's team at Stanford and other dedicated groups around the world, analyzing the human genome has decreased from a heroic multibillion dollar effort to a single clinical test costing less than \$1,000. For the first time we have within our grasp the ability to predict our genetic future, to diagnose and prevent disease before it begins, and to decode what it really means to be human. In The Genome Odyssey, Dr. Ashley details the medicine behind genome sequencing with clarity and accessibility. More than that, with passion for his subject and compassion for his patients, he introduces readers to the dynamic group of researchers and doctor detectives who hunt for answers, and to the pioneering patients who open up their lives to the medical community during their search for diagnoses and cures. He describes how he led the team that was the first to analyze and interpret a complete human genome, how they broke genome speed records to diagnose and treat a newborn baby girl whose heart stopped five times on the first day of her life, and how they found a boy with tumors growing inside his heart and traced the cause to a missing piece of his genome. These patients inspire Dr. Ashley and his team as they work to expand the boundaries of our medical capabilities and to envision a future where genome sequencing is available for all, where medicine can be tailored to treat specific diseases and to decode pathogens like viruses at the genomic level, and where our medical system as we know it has been completely revolutionized.

Twelve Years a Slave Solomon Northup 2021-01-01 "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

New Jersey's Lost Piney Culture William J. Lewis 2021-01-25 Deep within the heart of the New Jersey Pine Barrens, the Piney people have built a vibrant culture and industry from working the natural landscape around them. Foraging skills learned from the local Lenapes were passed down through generations of Piney families who gathered many of the same wild floral products that became staples of the Philadelphia and New York dried flower markets. Important figures such as John Richardson have sought to lift the Pineys from rural poverty by recording and marketing their craftsmanship. As the state government sought to preserve the Pine Barrens and develop the region, Piney culture was frequently threatened and stigmatized. Author and advocate William J. Lewis charts the history of the Pineys, what being a Piney means today and their legacy among the beauty of the Pine Barrens.

A Buccaneer's Atlas Basil Ringrose 1992-01-01 On July 29, 1681, a band of English buccaneers that had been terrorizing Spanish possessions on the west coast of the Americas captured a Spanish ship, from which they obtained a derrotero, or book of charts and sailing directions. When they arrived back in England, the Spanish ambassador demanded that the buccaneers be brought to trial. The derrotero was ordered to be brought to King Charles II, who apparently appreciated its great intelligence value. The buccaneers were acquitted, to the chagrin of the king of Spain, who had the English ambassador expelled from the court at Madrid on a seemingly trumped-up charge. The derrotero was subsequently translated, and one of the buccaneers, Basil Ringrose, added a text to the compilation and information to the Spanish charts. The resulting atlas, consisting of 106 pages of charts and 106 pages of text, is published in full for the first time in this volume. Covering the coast from California to Tierra del Fuego, the Galapagos, and Juan Fernandes, Basil Ringrose's south sea waggoner is a rich source of geographical information, with observations on navigational, physical, biological, and cultural features as well as on ethnography, customs, and folklore. After almost exactly three hundred years, this secret atlas is now made available to libraries and individuals. The editors have provided an extensive introduction on historical, geographical, and navigational aspects of the atlas, as well as annotations to the charts and text, and they have plotted the coverage of the charts on modern map bases.

The Beginnings of San Francisco Zoeth Skinner Eldredge 2008-08 The Beginnings Of San Francisco: From The Expedition Of Anza, 1774, To The City Charter Of April 15, 1850, By ZOETH S. ELDRIDGE. 1912. VOLUME II. CONTAINS Chapters XIII. to XVII. Notes 33 to 40 Appendix Index CHAPTER XIII. THE COMING OF THE ARGONAWS 1849-1 850 YEARS before the discovery of gold on the American river gold placers had been worked in California with varying degrees of success. But little attention was paid to this industry and it was not considered of much importance by either the Californians or the foreigners residing in their midst. The priests discouraged mining, the rancheros were indifferent to it, and neither class wished to see the country filled with a mining population. On March 2, 1844., the deputy for California to the Mexican congress, Don Manuel Castaires, reported to his government the discovery of gold in the vicinity of Los Angeles the previous year. These mines had produced from about the middle of the year to December 1843 two thousand ounces, the most of which had been sent to the United States. He said the placers extended a distance of nearly thirty leagues seventy-eight miles. William H. Thornes, writing from San Pedro where the ship Admittance was raking cargo June 30, 1843, says Here we also received ten iron flasks of gold dust, although where the latter came from no one knew, but it was reported that the merchants of the Pueblo 10s Angeles traded for it with the Indians and the latter would not reveal the source whence it came. When Alfred Robinson went to the United States Castaires Collection of Documents. t Thomes On Land and Sea, p. 253. 443 in 1843, he carried to the mint in Philadelphia a package of gold dust from Abel Stearns of Los Angeles, the assay of which showed it to be -906 fine. The placers from which this gold came were on the San Francisco rancho, near the mission of San Fernando. The rancho had formerly belonged to the mission, but at this time was in possession of the Del Valle family. The discovery was made in March 1842 and in the following May, Ignacio Del Valle was appointed encargo de justicias to preserve order in the mining district. William H. Davis says that from eighty to one hundred thousand dollars of gold was taken from these

places in two years. Colonel Mason in his report of August 17, 1848, on the gold fields of California says The gold placer near the mission of San Fernando has long been known but has been but little wrought for want of water. But the event that was to set the world ablaze and create an empire on the shores of the Pacific was the discovery by James W. Marshall of gold on the American river January 24, 1848. It may seem strange that in a community where the somewhat extensive placers of the San Fernando valley received so little attention a discovery of gold placers in the Sacramento valley should have created such intense excitement. It may be that the reason for this was that the discovery on the American river was so quickly followed by reports of the extent of the gold region and the astonishing richness of the placers. The gold deposits were on or near the surface, no capital was required to work them, and a laboring man with nothing but his pick, shovel, and pan could obtain from one to two or more ounces per day, with the possibility, always, of acquiring a fortune in a few weeks. In the foothills of the sierras about forty-five miles northeast of the Embarcadero of the Sacramento, on the south fork of the American river, Captain Sutter was building a sawmill in the fall and winter of 1847, and employed James W. Marshall to superintend the work. In digging a tail race for the mill, Marshall was in the habit of turning the water into the ditch at night to wash out the dirt loosened by the workmen during the day...

Non-Timber Forest Products Azamal Husen 2021-07-30 Forests cover thirty-one percent of the world's land surface, provide habitats for animals, livelihoods for humans, and generate household income in rural areas of developing countries. They also supply other essential amenities, for instance, they filter water, control water runoff, protect soil erosion, regulate climate, store nutrients, and facilitate countless non-timber forest products (NTFPs). The main NTFPs comprise herbs, grasses, climbers, shrubs, and trees used for food, fodder, fuel, beverages, medicine, animals, birds and fish for food, fur, and feathers, as well as their products, like honey, lac, silk, and paper. At present, these products play an important role in the daily life and well-being of millions of people worldwide. Hence the forest and its products are very valuable and often NTFPs are considered as the 'potential pillars of sustainable forestry'. NTFPs items like food, herbal drugs, forage, fuel-wood, fountain, fibre, bamboo, rattans, leaves, barks, resins, and gums have been continuously used and exploited by humans. Wild edible foods are rich in terms of vitamins, protein, fat, sugars, and minerals. Additionally, some NTFPs are used as important raw materials for pharmaceutical industries. Numerous industry-based NTFPs are now being exported in considerable quantities by developing countries. Accordingly, this sector facilitates employment opportunities in remote rural areas. So, these developments also highlight the role of NTFPs in poverty alleviation in different regions of the world. This book provides a wide spectrum of information on NTFPs, including

important references. We hope that the compendium of chapters in this book will be very useful as a reference book for graduate and postgraduate students and researchers in various disciplines of forestry, botany, medical botany, economic botany, ecology, agroforestry, and biology. Additionally, this book should be useful for scientists, experts, and consultants associated with the forestry sector.

Acoustic Properties Tom McEnaney 2017-06-15 Acoustic Properties: Radio, Narrative, and the New Neighborhood of the Americas discovers the prehistory of wireless culture. It examines both the coevolution of radio and the novel in Argentina, Cuba, and the United States from the early 1930s to the late 1960s, and the various populist political climates in which the emerging medium of radio became the chosen means to produce the voice of the people. Based on original archival research in Buenos Aires, Havana, Paris, and the United States, the book develops a literary media theory that understands sound as a transmedial phenomenon and radio as a transnational medium. Analyzing the construction of new social and political relations in the wake of the United States' 1930s Good Neighbor Policy, Acoustic Properties challenges standard narratives of hemispheric influence through new readings of Richard Wright's cinematic work in Argentina, Severo Sarduy's radio plays in France, and novels by John Dos Passos, Manuel Puig, Raymond Chandler, and Carson McCullers. Alongside these writers, the book also explores Che Guevara and Fidel Castro's Radio Rebelde, FDR's fireside chats, Félix Caignet's invention of the radionovela in Cuba, Evita Perón's populist melodramas in Argentina, Orson Welles's experimental New Deal radio, Cuban and U.S. "radio wars," and the 1960s African American activist Robert F. Williams's proto-black power Radio Free Dixie. From the doldrums of the Great Depression to the tumult of the Cuban Revolution, Acoustic Properties illuminates how novelists in the radio age converted writing into a practice of listening, transforming realism as they struggled to channel and shape popular power.

Trance Christopher Sorrentino 2006-04-18 1974: A tiny band of self-styled urban guerrillas, calling itself the Symbionese Liberation Army, abducts a newspaper heiress, who then abruptly announces that she has adopted the guerrilla name "Tania" and chosen to remain with her former captors. Has she been brainwashed? Coerced? Could she be sincere? Why would such a nice girl disavow her loving parents, her adoring fiancé, her comfortable home? Why would she suddenly adopt the SLA's cri de coeur, "Death to the Fascist Insect that Preys Upon the Life of the People"? Soon most of the SLA are dead, killed in a suicidal confrontation with police in Los Angeles, forcing Tania and her two remaining comrades--the pompous and abusive General Teko and his duplicitous lieutenant, Yolanda--into hiding, where they will remain for the next sixteen months. Trance, Christopher Sorrentino's mesmerizing and brilliant second novel, traces this fugitive period, leading the reader on a breathtaking, hilarious, and heartbreaking underground tour across a beleaguered America, in the company of scam artists, visionaries, cultists, and a mismatched gang of middle-class people who typify the guiding conceit of their time, that of self-renovation. Along the way he tells the story of a nation divided against itself--parents and children, men and women, black and white; a story of hidebound tradition and radical change, of truth and propaganda, of cynicism and idealism; a story as transfixing and relevant today as it was then. Insightful, compassionate, scathingly funny, and moving, Trance is a virtuoso performance, placing Christopher Sorrentino in the first rank of American novelists. Trance is a 2005 National Book Award Finalist for Fiction.

Benzodiazepines R.G. Priest 2012-12-06 U. Vianna Filho In his historical evolution, man has been able to dominate nature by means of his technological achievements, his knowledge and his inventiveness, attaining an increasing control over the world and its organization. As a result, his power over his fellow men has also increased, giving him more ,and more responsibility which leads, of necessity, to one existential problem: is the contemporary man, with all his power and knowledge, really happy? Technological progress has brought him several rights and desires: health, better insight into the future and greater control over his own des tiny, but despite all this he still suffers from insecurity and from all the new problems that he has to face, which fact accounts for his imperfections and limitations that inevitably generate anxiety. Anxiety, therefore, constitutes one of the main characteristics of modern man. It can be foreseen today that, in the near future, the entire population of any large city will suffer from anxiety and behave in a 'neurotic' way. Man is seeking relief from pain, suffering and, naturally, also anxiety. Thus all possible efforts are being made to find a solution for this anxiety. The search for substances that are able to eliminate anxiety is one of the constant concerns of modern science, and, in this context, one of the turn ing points, as we will see in this volume, has been the discovery of the chemi cal agents known as the benzodiazepines.
