Sustainable Development in Rural Areas Great Britain. Office of the Deputy Prime Minister 2004 Sustainable development is the core principle underpinning land use planning. The policies in this statement apply to the rural areas, including country towns and villages and the wider, largely undeveloped countryside up to the fringes of larger urban areas. The key principles identified are: (i) decisions on development should be based on sustainable development principles; (ii) good quality accessible development within towns and villages should be allowed where it benefits the local community; (iii) accessibility should be a key consideration, with emphasis on access by public transport, walking and cycling; (iv) new building in the open countryside away from existing settlements should be strictly controlled; (v) priority should be given to the reuse of brownfield sites. This PPS replaces PPG 7 (1997) with the exception of PPG7's Annex E, which provides further guidance on permitted development rights for agriculture and forestry and will remain extant pending a review by ODPM of the General Permitted Development Order 1995.

Managing in Recovering Markets S. Chatterjee 2014-10-27 The changing dynamics of business worldwide have led organizations to look beyond traditional managerial practices while at the same time attempting to retain their core competitive advantages. This development has called upon academicians and practitioners alike to reassess the different aspects of business management such as macroeconomic variables, the nature of the market, the changing features of the workplace, the new work ethos, and/or employer-employee exchanges. In this context, the book provides essential insights on industry innovations, academic advances and policy movements with regard to recovering markets in India and around the globe. The individual papers highlight potential avenues that could allow industry to better understand and respond to the global crisis. The book collects research papers presented at the Global Conference on Managing in Recovering Markets (GCMRM), held in March 2014. Seven international and 120 national business schools and management universities were represented at the conference, the first in a series of 13 planned under the GCMRM agenda for 2014–17. The SAGES Manual of Hernia Surgery S. Scott Davis, Jr. 2018-11-02 This edition of the SAGES Manual of Hernia Surgery aligns with the current version of the new SAGES University MASTERS Program Hernia Surgery pathway. This manual serves as a curriculum for participants in the MASTERS Program as well as a modern text on hernia surgery for all learners. Hernia surgery is one of the fastest developing fields in general surgery today. There have been rapid advancements in hernia techniques in recent years, making most prior texts on the subject obsolete. These advancements involve significant evolution in both the techniques and strategies for hernia repairs, as well as the tools used to achieve these means. This text thoroughly addresses the multiple component separation techniques and options for locations of mesh repairs. It also discusses the revolution of hernia repair being facilitated by robotic surgery, which allows increased access to minimally invasive techniques for surgeons and thus increased access to minimally invasive surgical repairs for patients. This manual will be a valuable resource for interested surgeons to understand the variety of potential approaches to individual hernias, and to individually tailor the care of the hernia patient.

The Role of Laparoscopy in Emergency Abdominal Surgery Vincenzo Mandala 2011-12-07 This is the first time a book about laparoscopy in emergency abdominal surgery has been published. Numerous articles have been published in specific surgical journals, but, until now, there has not been a book that collates all the aspects of this little-known field. The aim of this volume is to achieve a complete and easy presentation of all the implications associated with laparoscopy in emergency abdominal surgery. The book should be a manual that can be easily consulted by digestive, general, and specialized surgeons, especially in an emergency. The authors' contributions are founded on evidence-based medicine, which give the book scientific credibility, but this is coupled with their experience of daily practice, which adds an important complementary dimension to evidence-based medicine. This is balanced by an emphasis on clarity and accessibility, because the ultimate aim of the book is educational. We hope this book will be frequently consulted, in depth, not only by specialist practitioners, but also by undergraduate students, new graduates and surgeons in training.

Southern Edwardseans Obbie Tyler Todd 2022-01-17 The founders and forerunners of the Southern Baptist Convention were fundamentally shaped by the thought of Puritan theologian Jonathan Edwards and his theological successors. While Baptists in the antebellum South boasted a different theological pedigree than Presbyterians or Congregationalists, and while they inhabited a Southern landscape unfamiliar to the bustling cities and tall forests of New England, they believed their similarities with Edwards far outweighed their differences. Like Edwards, these Baptists were revivalistic, Calvinistic, loosely confessional, and committed to practical divinity. In these four things, Southern Edwardseanism lived, moved, and had its being. In the nineteenth-century, when so many Presbyterians scoffed at Edwards's "innovation" and Methodists scorned his Calvinism, Baptists found in Edwards a man after their own heart. By 1845, at the first Southern Baptist Convention, Southern Edwardseans had laid the groundwork for a convention marked by the theology of Jonathan Edwards.

Towards the Internet of Services: The THESEUS Research Program Wolfgang Wahlster 2014-09-01 The Internet of Services and the Internet of Things are major building blocks of the Future Internet. The digital enterprise of the future is based not only on mobile, social, and cloud technologies, but also on semantic technologies and the future Internet of Everything. Semantic technologies now enable mass customization for the delivery of goods and services that meet individual customer needs and tastes with near mass production efficiency and reliability. This is creating a competitive advantage in the industrial economy, the service economy, and the emerging data economy, leading to smart products, smart services, and smart data, all adaptable to specific tasks, locations, situations, and contexts of smart spaces. Such technologies allow us to describe, revise, and adapt the characteristics, functions, processes, and usage patterns of customization targets on the basis of machine-understandable content representation that enables automated processing and information sharing between human and software agents. This book explains the principal achievements of the Theseus research program, one of the central programs in the German government's Digital 2015 initiative and its High-Tech Strategy 2020. The methods, toolsets, and standards for semantic technologies developed during this program form a solid basis for the fourth industrial revolution (Industrie 4.0), the hybrid service economy, and the transformation of big data into useful smart data for the emerging data economy. The contributing authors are leading scientists and engineers, representing world-class academic and industrial research teams, and the ideas, technologies, and representative use cases they describe in the book derive from results in multidisciplinary fields, such as the Internet of Services; the Semantic Web, and semantic technologies, knowledge management, and search; user interfaces, multimodal interaction, and visualization; machine learning and data mining; and business process support, manufacturing, automation, medical systems, and integrated service engineering. The book will be of value to both researchers and practitioners in these domains.

Laparoscopic Ventral Hernia Repair Salvador Morales-Conde 2013-12-11 Primary and incisional ventral hernias are common conditions often encountered in surgical practice. Because of the frequency of this problem it has come to be managed by surgeons in general, regardless of the type of hospital or the conditions dealt with in their daily practice. Laparoscopic surgery has demonstrated to have an important role among the different technique described to repair ventral hernia with less recurrent rate, less morbidity and less overall cost than open conventional repair, with all the advantage of the laparoscopic approach. As a result the indications for this surgical technique are currently being debated since the advantages are evident and progressive implementation is ensured. Now is the time to analyze the usefulness, results, technical variants, anatomic, physiologic and scientific basis and implications involved in implementation of laparoscopy as the technique of choice.

This study will be of interest to students and professionals in the areas of communication, international telecommunications companies, and country governments in Latin America.

Environmental Crime and Social Conflict Avi Brisman 2016-03-09 This impressive collection of original essays explores the relationship between social conflict and the environment - a topic that has received little attention within criminology. The chapters provide a systematic and comprehensive introduction and overview of conflict situations stemming from human exploitation of environments, as well as the impact of social conflicts on the wellbeing and health of specific species and ecosystems. Largely informed by green criminology perspectives, the chapters in the book are intended to stimulate new understandings of the relationships between humans and nature through critical evaluation of environmental destruction and degradation associated with social conflicts occurring around the world. With a goal of creating a typology of environment-social conflict relationships useful for green criminological research, this study is essential reading for scholars and academics in criminology, as well as those interested in crime, law and justice. Illusory Borders Heidi Reszies 2019-11-11 'Illusory Borders' is grounded in a process that incorporates fragments, lists, and reflections on 'woman's work.' It is inspired, in part, by lists I discovered in a woman's day-planner from the 1940's (a DailyAide Silent Secretary), as well as an erasure I created a few years ago from Gertrude Stein's Tender Buttons, in particular, the section titled "Objects." My erasure became a list poem which I explored/enacted in different ways over time, eventually creating a series of prose poems/a long poem stitched together by fragments that I'd cut and collaged from my original list. This series/long poem seeks to expand liminal spaces, marginality, the unsaid, the footnotes of dailyness and everyday objects, as well as my own necessity to work in a series: continually ending and beginning.

Twelve Years a Slave Solomon Northup 2021-01-01 "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt
