Dreamland: Adventures in the Strange Science of Sleep David K. Randall 2012-08-13 An engrossing examination of the science behind the little-known world of sleep. Like many of us, journalist David K. Randall never gave sleep much thought. That is, until he began sleepwalking. One midnight crash into a hallway wall sent him on an investigation into the strange science of sleep. In Dreamland, Randall explores the research that is investigating those dark hours that make up nearly a third of our lives. Taking readers from military battlefields to children's bedrooms, Dreamland shows that sleep isn't as simple as it seems. Why did the results of one sleep study change the bookmakers' odds for certain Monday Night Football games? Do women sleep differently than men? And if you happen to kill someone while you are sleepwalking, does that count as murder? This book is a tour of the often odd, sometimes disturbing, and always fascinating things that go on in the peculiar world of sleep. You'll never look at your pillow the same way again.

Feminine Psychology Karen Horney 1993 Based on her clinical observations, a psychoanalyst evaluates the basis of female behavior and refutes Freudian concepts of female psychosexual development

Theories of Personality Duane P. Schultz 2001 This revision of the Schultz's popular text surveys the field, presenting theory-by-theory coverage of the major theorists who represent the psychoanalytic, neopsychanalytic, life-span, trait, humanistic, cognitive, behavioral, and social-learning approaches, as well as clinical and experimental work. Where warranted, the authors show how the development of certain theories was influenced by events in a theorist's personal and professional life. This thoroughly revised Seventh Edition now incorporates more examples, tables, and figures to help bring the material to life for students. The new content in this edition reflects the dynamism in the field. The text explores how race, gender, and culture issues figure in the study of personality and in personality assessment. In addition, a final integrative chapter looks at the study of personality theories and suggests conclusions that can be drawn from the many theorists' work.

Dimensions of Personality Hans J. Eysenck 1998 This is the original work on which Hans Eysenck's fifty years of research have been built. It introduced many new ideas about the nature and measurement of personality into the field, related personality to abnormal psychology, and demonstrated the possibility of testing personality theory experimentally. The book is the result of a concentrated and cooperative effort to discover the main dimensions of personality, and to define them operationally, that is, by means of strictly experimental, quantitative procedures. More than three dozen separate researches were carried out on some 10,000 normal and neurotic subjects by a research team of psychologists and psychiatrists. A special feature of this work is the close collaboration between psychologists and psychiatrists. Eysenck believes that the exploration of personality would have reached an advanced state much earlier had such a collaboration been the rule rather than the exception in studies of this kind. Both disciplines benefit by working together on the many problems they have in common. In his new introduction, Eysenck discusses the difficulty he had in conveying this belief to scientists from opposite ends of the psychology spectrum when he first began work on this book. He goes on to explain the basis from which Dimensions of Personality developed. Central to any concept of personality, he states, must be hierarchies of traits organized into a dimensional system. The two major dimensions he posited, neuroticism and extraversion, were in disfavor with most scientists of personality at the time. Now they form part of practically all descriptions of personality. Dimensions of Personality is a landmark study and should be read by both students and professionals in the fields of psychiatry, psychology, and sociology.

Creativity/Anthropology Renato Rosaldo 2018-03-15 Creativity and play erupt in the most solemn of everyday worlds as individuals reshape traditional forms in the light of changing historical circumstances. In this lively volume, fourteen distinguished anthropologists explore the life of creativity in social life across the globe and within the study of ethnography itself. Contributors include Barbara A. Babcock, Edward M. Bruner, James W. Fernandez, Don Handelman, Smadar Lavie, José E. Limon, Barbara Myerhoff, Kirin Narayan, Renato Rosaldo, Richard Schechner, Edward L. Schieffelin, Marjorie Shostak, Anna Lowenhaupt Tsing, and Edith Turner.

Social Representations for the Anthropocene: Latin American Perspectives Clarilza Prado de Sousa 2021-04-30 The Anthropocene has become a field of studies in which the influence of human activity on the Earth System and nature is both the main threat and the potential solution. Social Representations Theory has been evolving since the 1960s. It links knowledge and practice in everyday life and is an effective way to deal with systemic crises based on common sense. This book assembles key contributions by Latin American scholars working with social representations in the social sciences that are of conceptual relevance to the study of the Anthropocene and that investigate the societal consequences of complex interrelations between common sense and topics of global relevance, such as the contradictions of sustainable development, the construction of risks beyond risk-perception, health, negotiation and governance in the field of education, gender equality, the usefulness of longitudinal and systemic ethnography

and case studies, and agency and the link between inequality, crises and risk society in the context of COVID-19, presenting theoretical and methodological innovations from Spanish, Portuguese and French research that have rarely been available in English. • This is the first book to address the relevance of Social Representations Theory for the Anthropocene as a societal era • It presents the multidisciplinary scope of Social Representations • This book covers emerging research contributions in Social Representations Theory from Latin America • This book presents innovative research and commentaries by established researchers in the field • This multidisciplinary book should be in the libraries of many disciplines in the social sciences and humanities

Twelve Years a Slave Solomon Northup 2021-01-01 "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

American Psychiatric Association Practice Guidelines American Psychiatric Association 1996 The aim of the American Psychiatric Association Practice Guideline series is to improve patient care. Guidelines provide a comprehensive synthesis of all available information relevant to the clinical topic. Practice guidelines can be vehicles for educating psychiatrists, other medical and mental health professionals, and the general public about appropriate and inappropriate treatments. The series also will identify those areas in which critical information is lacking and in which research could be expected to improve clinical decisions. The Practice Guidelines are also designed to help those charged with overseeing the utilization and reimbursement of psychiatric services to develop more scientifically based and clinically sensitive criteria.

Sleep Medicine Sudhansu Chokroverty 2015-09-22 This comprehensive volume provides a balanced and easily readable account of the rise of modern sleep medicine, its history and developmental milestones. Authored by an international group of experts, the remarkable progress and fascinating evolution from rudimentary concepts of the ancient prehistoric and early classical periods to our contemporary knowledge are covered in detail. These examples and their relationship to modern therapies offer neurologists, psychiatrists, respiratory specialists, clinicians, researchers and those interested in sleep medicine an important perspective to the origins of current practice.

Virtues and Vices in Positive Psychology Kristján Kristjánsson 2013-09-23 Positive psychology is one of the biggest growth industries in the discipline of psychology. At the present time, the subfield of 'positive education' seems poised to take the world of education and teacher training by storm. In this first book-length philosophical study of positive psychology, Professor Kristján Kristjánsson subjects positive psychology's recent inroads into virtue theory and virtue education to sustained conceptual and moral scrutiny. Professor Kristjánsson's interdisciplinary perspective constructively integrates insights, evidence and considerations from social science and philosophy in a way that is easily accessible to the general reader. He offers an extended critique of positive psychology generally and 'positive education' in particular, exploring the philosophical assumptions, underpinnings and implications of these academic trends in detail. This provocative book will excite anyone interested in cutting-edge research on positive psychology and on the virtues that lie at the intersection of psychology, philosophy of mind, moral philosophy, education, and daily life.

Obsessive-Compulsive Disorder Richard P. Swinson 2001-10-31 Drawing upon extensive interviews and assessments of school-age children who have lost a parent to death, this book offers a richly textured portrait of the mourning process in children. The volume presents major findings from the Harvard Child Bereavement Study and places them in the context of previous research, shedding new light on both the wide range of normal variation in children's experiences of grief and the factors that put bereaved children at risk. The book also compares parentally bereaved children with those who have suffered loss of a sibling to death, or of a parent through divorce, exploring similarities and differences in these experiences of loss. A concluding section explores the clinical implications of the findings and includes a review of intervention models and activities, as well as a screening instrument designed to help identify high-risk bereaved children.

Part One Arne De Boever 2017-05-17 Published on the occasion of the Berlin Institute for Cultural Inquiry (ICI) conference in 2013, this volume collects papers presented at the first Psychopathologies of Cognitive Capitalism conference in Los Angeles (2012). Philosophers, critical theorists, media theorists, art historians, architects and artists including Jonathan Beller, Franco Bifo Berardi, Arne de Boever, Jodi Dean, Warren Neidich, Patricia Pisters, Jason Smith, Tiziana Terranova, and Bruce Wexler discuss cognitive capitalism as it relates to the conditions of mind and brain in the world of advanced telecommunication, data mining and social relations.

The American Psychiatric Publishing Textbook of Psychiatry Robert E. Hales 2008 Its previous edition hailed as "the best reference for the majority of practicing psychiatrists" (Doody's Book Reviews) and a book that "more than any other, provides an approach to how to think about psychiatry that integrates both the biological and psychological" (JAMA), The American Psychiatric Publishing Textbook of Psychiatry has been meticulously revised to maintain this preeminence as an accessible and authoritative educational reference and clinical compendium. It combines the strengths of its three editors -- Robert Hales in clinical and community psychiatry, Stuart Yudofsky in neuropsychiatry, and new co-editor Glen Gabbard in psychotherapy -- in recruiting outstanding authors to summarize the latest developments in psychiatry and features 101 contributors, 65 of whom are new to this edition. The book boasts a new interior design, with more figures and color throughout to aid comprehension. Each chapter ends with 5-10 key points, 5-10 recommended readings, and helpful Web sites not only for the clinician but also for patients and family members. The book also includes complimentary access to the full text online. Online benefits include powerful searching, electronic bookmarking, and access by username and password from wherever you have Web access -- especially convenient for times when the print copy of your textbook is not where you are. The online version is accompanied by a downloadable PowerPoint presentation, which contains a wealth of material to enhance classroom presentation, study, and clinical use. Among the improvements to this edition's content: • Of the text's 44 chapters, 23 either feature new topics or have new authors, making this the most completely revised edition yet. • New basic-science chapters on cellular and molecular biology of the neuron and on neuroanatomy for the psychiatrist conveniently distill essential information on the biological foundations of psychiatric disorders for clinicians. • A new chapter on human sexuality and sexual dysfunctions, and another new chapter on treatment of gay, lesbian, bisexual, and transgender patients, equips clinicians to address the entire spectrum of sexual issues and their attendant mental health concerns. • New chapters on nonpharmacological somatic treatments, supportive psychotherapy, and combination psychotherapy and pharmacotherapy augment the section on psychiatric treatments. • A new chapter on the assessment of dangerousness -- an individual's propensity to commit violent acts -- presents helpful guidelines for appropriately evaluating and minimizing the risk of violence in both outpatient and inpatient settings. Why The American Psychiatric Publishing Textbook of Psychiatry will be your first choice among comprehensive psychiatry textbooks: • Complimentary Access to the Full Text Online -- Online benefits include powerful searching, electronic bookmarking, and download to PDA. • PowerPoint Presentation -- Online version is accompanied by a downloadable PowerPoint presentation, which contains a wealth of material to help you enhance classroom presentation, study, and in clinical use. • Self-Assessment -- An interactive online Self-Assessment allows you to assess your knowledge of each chapter, with links back to the textbook when more study is needed. • Summary Points -- Each chapter ends with 5-10 key points, 5-10 recommended readings, and helpful web sites not only for the clinician but also for referral to patients and family members. • Co-Editor Glen O. Gabbard, M.D. -- As the third Co-Editor, Dr. Gabbard adds depth and perspective to psychotherapeutic approaches. • Chapter Authors -- Partnership of senior and junior faculty brings fresh insights tempered by wisdom and experience. • Peer-Reviewed -- Rigorously peer reviewed and updated to reflect the rapidly changing profession. • Disclosure of Interest Statements -- Disclosure from each chapter author assures you that potential biases have been removed. • Comprehensive But Concise -- Inclusion of essential information eases information

overload. • Better Layout -- Larger type for text makes book easier to read and color figures are provided throughout the text. It's no wonder that this text has established itself as both a leading scholarly reference and an indispensable clinical resource. The American Psychiatric Publishing Textbook of Psychiatry is a proven teaching tool and an essential component of every practitioner's library.

Hypnosis and Behavioral Medicine Daniel P. Brown 2013-12-19 This important volume applies hypnotic principles to the specific challenges of behavioral medicine. Drawing from extensive clinical evidence and experience, the authors describe how hypnotherapeutic techniques can help in the treatment of psychophysiological disorders.

The Philosophy of Mathematics Education Today Paul Ernest 2018-06-09 This book offers an up-to-date overview of the research on philosophy of mathematics education, one of the most important and relevant areas of theory. The contributions analyse, question, challenge, and critique the claims of mathematics education practice, policy, theory and research, offering ways forward for new and better solutions. The book poses basic questions, including: What are our aims of teaching and learning mathematics? What is mathematics anyway? How is mathematics related to society in the 21st century? How do students learn mathematics? What have we learnt about mathematics teaching? Applied philosophy can help to answer these and other fundamental questions, and only through an in-depth analysis can the practice of the teaching and learning of mathematics be improved. The book addresses important themes, such as critical mathematics education, the traditional role of mathematics in schools during the current unprecedented political, social, and environmental crises, and the way in which the teaching and learning of mathematics can better serve social justice and make the world a better place for the future.

The Seduction of Modern Spain Aurora G. Morcillo 2010 This book examines how sexual politics, specifically those surrounding the modernization of a consumer economy, are key to understanding the transformation of Spain from isolated dictatorship to modern state. It focuses on issues concerning modernity and the commodification of the female body under the dictatorship of Francisco Franco in the 1950s and 1960s. These two decades are critical to understanding this transformation because they coincide with the opening of markets, the freer movement of people in and out of the country through tourism and emigration, and the embracing of the "American way of life" popularized in Hollywood movies. From a gender perspective this "in between moment" in Homi Bhabha's terms, from autarchy to consumerism favored the transition from the virginal female model, prescribed by the regime, (what the author calls "True Catholic Womanhood") to a seductive modern woman that the media sold to Spanish women. This study will add a significant piece to the growing corpus of literature on the body as an essential element of analysis in gender history and in the power dynamics of culture. It will help to fill a gap in the field of Spanish Cultural Studies in general and the emerging field of cultural Spanish history in particular. The originality of this study resides in Dr. Morcillo's use of feminist theories of the body to study archival sources of the Francoist years. Of special interest are the collections of Ministry of Culture and Administrative papers Women's Section of Falange at the Archivo General de la Administracion in Alcala de Henares. Also important are the works of intellectuals of the period, as well as health books, maternity and hygiene guides, conduct manuals, and documents produced by the Catholic Church hierarchy with regard to moral behavior and sexual mores that provide a textured analysis of gender relations under the dictatorship. The author's interest in unveiling the regime's technologies of control of ordinary Spaniards is covered through the study of the media, printed press, and the movie industry of this period particularly the so-called New Spanish Cinema inaugurated in the 1960s, illustrating how ads and films shaped and contested the regime's vision of modernity and gender roles. Through the production of dual versions of films the censorship process utilized women's cinematic bodies to present a more liberal image of Spain in the international scene. While nudity was allowed in the international versions the domestic productions continued to cut the customary kiss. The economy of desire displayed in today's Almodovar's films is already present in movies like La Tia Tula by Miguel Picazo (1964). This book will be essential for scholars and students interested in Ibero-American cultural studies, gender, religion, and totalitarian politics.

Abnormal Illness Behaviour Issy Pilowsky 1997-08-04 Pilowsky presents a general introduction to the early recognition and management of abnormal illness behaviour, and suggests ways to identify such behaviour, offer appropriate psychological care and provide specialist psychiatric help.

Motivation And Personality A H Maslow 1981-01-01 I have tried in this revision to incorporate the main lessons of the last sixteen years. These lessons have been considerable. I consider it a real and extensive revision-even though I had to do only a moderate amount of rewriting-because the main thrust of the book has been modified in important ways which I shall detail below.

The Reception of Darwinism in the Iberian World T.F Glick 2012-12-06 I Twenty-five years ago, at the Conference on the Comparative Reception of Darwinism held at the University of Texas in 1972, only two countries of the Iberian world-Spain and Mexico-were represented.' At the time, it was apparent that the topic had attracted interest only as regarded the "mainstream" science countries of Western Europe, plus the United States. The Eurocentric bias of professional history of science was a fact. The sea change that subsequently occurred in the historiography of science makes 1972 appear something like the antediluvian era. Still, we would like to think that that meeting was prescient in looking beyond the mainstream science countries-as then perceived-in order to test the variation that ideas undergo as they pass from center to periphery. One thing that the comparative study of the reception of ideas makes abundantly clear, however, is the weakness of the center/periphery dichotomy from the perspective of the diffusion of scientific ideas. Catholics in mainstream countries, for example, did not handle evolution much better than did their coreligionaries on the fringes. Conversely, Darwinians in Latin America were frequently better placed to advance Darwin's ideas in a social and political sense than were their fellow evolutionists on the Continent. The Texas meeting was also a marker in the comparative reception of scientific ideas, Darwinism aside. Although, by 1972, scientific institutions had been studied comparatively, there was no antecedent for the comparative history of scientific ideas.

Toward a Theory of Peace Randall Caroline Watson Forsberg 2019-12-15 Military analyst, peace activist, teacher, and social theorist Randall Caroline Watson Forsberg (1943–2007) founded the Nuclear Freeze campaign and the Institute for Defense and Disarmament Studies. In "Toward a Theory of Peace," completed in 1997 and published for the first time here, she delves into a vast literature in psychology, anthropology, archeology, sociology, and history to examine the ways in which changing moral beliefs came to stigmatize forms of "socially sanctioned violence" such as human sacrifice, cannibalism, and slavery, eventually rendering them unacceptable. Could the same process work for war? Edited and with an introduction by political scientists Matthew Evangelista (Cornell University) and Neta C. Crawford (Boston University), both of whom worked with Forsberg.

Introduction to Clinical Psychology Lynda A. Heiden 2013-06-29 Bringing together contributions by leaders in the field of clinical psychology, this highly readable textbook provides a current perspective on theory, training, assessment, consultation, research, and outpatient and inpatient practice. Bridging the gap between theory and practice, contributors offer a professional perspective on the various specialized activities and settings of a clinical psychologist. With this unique insight, advanced undergraduate and beginning graduate students gain a realistic understanding of the life of a clinical psychologist as well as the diverse professional opportunities in the field.

Conduct Disorders in Childhood and Adolescence Alan E. Kazdin 1995-03-27 The prevalence of conduct disorder in children constitutes a severe and persistent social problem. Conduct disorder - which encompasses antisocial behaviours such as aggressive acts, theft, vandalism, arson, running away, truancy and defying authority - is a common reason for referring children and adolescents for psychological and psychiatric treatment. The newly revised edition of this volume describes the nature of conduct disorder, incorporating the most important findings since the publication of the original. The author draws on current research and clinical work from a variety of fields to explore such topics as: psychiatric diagnosis; child-rearing practices; parent psychopathology; sex differences in development; i

**Medical Factors and Psychological Disorders** Alan S. Bellack 2012-12-06 Throughout the last decade, the field of clinical psychology has expanded dramatically. Clinical psychologists are involved in the treatment and research of a wider range of problems and disorders than they have ever been before. Evidence has been rapidly accumulating regarding the role of psychological variables and stress in the etiology and maintenance of a range of medical and psychiatric disorders. New models of psychotherapy have been developed and refined, and the specific efficacy of psychotherapeutic interventions for an increasing number of disorders (or subtypes of disorders) has been documented. However, concurrent with research that demonstrates the impact of psychosomatic factors in various disorders and the efficacy of psychological or psychosocial interventions, dramatic progress has been made with regard to the investigation of biological factors that may mediate certain disorders. That physical factors may underlie many instances of psychiatric illness has been repeatedly demonstrated. Also, the efficacy of somatic treatments for different disorders, or for subtypes of disorders, has been reported with increasing methodological rigor.

**Dabrowski's Theory of Positive Disintegration** Sal Mendaglio 2008 Kazimierz Dabrowski's Theory of Positive Disintegration (TPD), which includes the widely known "overexcitabilities," is one of the most influential theories in gifted education. It summarizes the research and application of TPD and compares it to other theories of personality and psychological development.

**Leo Strauss and the Politics of American Empire** Anne Norton 2005-01-01 This provocative book examines the teachings of political theorist Leo Strauss and the ways in which they have been appropriated, or misappropriated, by senior policymakers.

**The Nature of Personality: Selected Papers** Gordon Willard Allport 1975 The articles concern the understanding, prediction, and control of attitudes; the functional autonomy of motives; a psychological interpretation of personality; motivation in personality, etc.

**Transvestism, Masculinity, and Latin American Literature** B. Sifuentes-Jáuregui 2002-02-22 This book is about transvestism and the performance of gender in Latin American literature and culture. Ben. Sifuentes-Jáuregui explores the figure of the transvestite and his/her relation to the body through a series of canonical Latin American texts. By analyzing works by Alejo Carpentier, José Donoso, Severo Sarduy and Manuel Puig (author of Kiss of the Spiderwoman), alongside critical works in gender studies and queer theory, Sifuentes-Jáuregui shows how transvestism operates not only to destabilize, but often to affirm sexual, gender, national and political identities.

**Practice Guideline for the Treatment of Patients with Major Depressive Disorder** American Psychiatric Association 2000 This manual provides the American Psychiatric Association's guidelines for the treatment of patients with major depressive disorder. It is divided into three sections, covering treatment recommendations; background information and review of available evidence; and future research needs. It seeks to summarize the specific forms of somatic, psychotherapeutic, psychosocial and educational treatments that have been developed to deal with major depressive disorder.

**Human Enhancement Drugs** Katinka van de Ven 2019-07-02 Despite increasing interest in the use of human enhancement drugs (HEDs), our understanding of this phenomenon and the regulatory framework used to address it has lagged behind. Encompassing public health, epidemiology, neuroethics, sport science, criminology, and sociology, this book brings together a broad spectrum of scholarly insights and research expertise from leading authorities to examine key international issues in the field of HEDs. As "traditional" and other "new" drug markets have occupied much of the academic attention, there has been a lack of scholarly focus on human enhancement drugs. This book provides readers with a much-needed understanding of the illicit drug market of HEDs. The authors, from a variety of cultural contexts, disciplines and perspectives, include both academics and practitioners. Topics explored in this collection amongst others include: • The anti-doping industry and performance and image enhancing drugs • Steroids and gender • The use of cognitive enhancing drugs in academia • The use of sunless synthetic tanning products • The (online) trade of HEDs • Regulations of the enhancement drugs market This collection will serve as a reference for students, academics, practitioners, law enforcement and others working in this area to reflect on the current state of research and consider future priorities. This detailed exploration will provide a valuable knowledge base for those interested in human enhancement drugs, while also promoting critical discussion.

**The Emotional Life of Nations** Lloyd DeMause 2002

**Transfigurations** Asbjørn Grønstad 2008 Transfigurations: Violence, Death and Masculinity in American Cinema brings the problem of film violence into a renewed dialogue with contemporary theory

**Sleep and Its Secrets** Michael S. Aronoff 2013-11-11

**Hannah Arendt, Totalitarianism, and the Social Sciences** Peter Baehr 2010-03-11 This book examines the nature of totalitarianism as interpreted by some of the finest minds of the twentieth century. It focuses on Hannah Arendt's claim that totalitarianism was an entirely unprecedented regime and that the social sciences had integrally misconstrued it. A sociologist who is a critical admirer of Arendt, Baehr looks sympathetically at Arendt's objections to social science and shows that her complaints were in many respects justified. Avoiding broad disciplinary endorsements or dismissals, Baehr reconstructs the theoretical and political stakes of Arendt's encounters with prominent social scientists such as David Riesman, Raymond Aron, and Jules Monnerot. In presenting the first systematic appraisal of Arendt's critique of the social sciences, Baehr examines what it means to see an event as unprecedented. Furthermore, he adapts Arendt and Aron's philosophies to shed light on modern Islamist terrorism and to ask whether it should be categorized alongside Stalinism and National Socialism as totalitarian.

**Introduction to Theories of Personality** Calvin S. Hall 1985-03-07 A comprehensive, clearly written text designed for undergraduate courses in introductory personality. Describes and interprets the major theories of personality. Emphasizes each theory's significance and application. Includes figures, tables, summaries, and boxed inserts featuring biographies and applications of theory to research.

**Psychological Types** C. G. Jung 2019-10-22 In this classic work, originally published in 1921, Jung categorized people into primary types of psychological function. He proposed four main functions of consciousness: Two perceiving functions: Sensation and Intuition Two judging functions: Thinking and Feeling The functions are modified by two main attitude types: extraversion and introversion. Jung theorized that the dominant function characterizes consciousness, while its opposite is repressed and characterizes unconscious behavior. The eight psychological types are as follows: Extraverted sensation Introverted sensation Extraverted intuition Introverted intuition Extraverted thinking Introverted thinking Extraverted feeling Introverted feeling In "Psychological Types," Jung describes in detail the effects of tensions between the complexes associated with the dominant and inferior differentiating functions in highly and even extremely one-sided types.
